

HOW DO I FLUSH A GASTROSTOMY TUBE?

Flush the tube before and after the administration of enteral nutrition or medication or 4-6 hourly (except during the night) if tube feeding is not in progress.

To prevent tube blockages, always follow the flushing advice and routine recommended by your healthcare professional.

Always check the cm markings at skin level and the length of the tube to make sure it remains unchanged, if it has changed **do not use** and contact your healthcare professional immediately.

It is important that you contact your Nutricia Homeward Nurse if you need any additional training.

Ensure the patient is positioned comfortably at an angle of 30-45°.

Before and after handling the tube wash your hands with liquid soap and water and dry them thoroughly.

You will need:

- 60ml enteral feeding syringe
- Water, type and volume as recommended by your healthcare professional.

ADMINISTER A WATER FLUSH USING THE PLUNGE METHOD

Draw up required volume of water in a 60ml enteral feeding syringe

Close clamp on feeding tube, if present

If no clamp is present kink the tube between your fingers to stop leakage

Remove cap from the feeding tube

Connect syringe to the tube, being careful not to over-tighten

Grudzinskas, Michael G. Chapman, Timothy Chard, Ovrang Djahanbakhch, 2012-12-06 The examination of the human fallopian tubes was until recently restricted to observations on gross anatomical disposition and tubal patency These studies for decades were the domain of doctors and physiologists whose primary interest was population control and family planning funded largely by organisations and agencies seeking alternatives to steroidal contraceptives For a worrying but short period after the birth of Louise Brown in 1978 as the consequence of successful in vitro fertilisation and embryo transfer the fallopian tube was considered to be dispensable given that the metabolic milieu in which human fertilisation takes place could be effortlessly reproduced in a Petri dish in in vitro fertilisation procedures However a number of factors have acted together to renew interest in the fallopian tube namely new techniques in cell biology microinstrument developments in particular in imaging an interdisciplinary transfer of skills from interventional radiology and cardiology to gynaecology the surgeon's wish to improve surgical techniques and better techniques to monitor early pregnancy These factors have led surgeons to develop the new diagnostic and therapeutic strategies and techniques listed here This volume contains contributions from the majority of keynote speakers at a conference held in London in April 1992 from which its title is derived Better diagnostic procedures should lead to the implementation of rational effective treatments **Cryocoolers 13** Ronald G.
