Centering Humanism in STEM Education

Bryan Dewsbury, Susannah McGowan, Sheila S. Jaswal, Desiree Forsythe, 2024-09-24 Research demonstrates that STEM disciplines perpetuate a history of exclusion particularly for students with marginalized identities This poses problems particularly when science permeates every aspect of contemporary American life Institutions repeated failures to disrupt systemic oppression in STEM has led to a mostly white cisgender and male scientific workforce replete with implicit and or explicit biases Education holds one pathway to disrupt systemic linkages of STEM oppression from society to the classroom Maintaining views on science as inherently objective isolates it from the world in which it is performed STEM education must move beyond the transactional approaches to transformative environments manifesting respect for students social and educational capital We must create a STEM environment in which students with marginalized identities feel respected listened to and valued We must assist students in understanding how their positionality privilege and power both historically and currently impacts their meaning making and understanding of STEM

ago projections of how office technologies would revolutionize the production of documents in a high tech future carried many promises. The paperless office and the seamless and problem free sharing of texts and other work materials among co-workers were just around the corner we were told. To anyone who has been involved in putting together a volume of the present kind such forecasts will be met with considerable skepticism if not outright distrust. The diskette, the email, the fax, the net and all the other forms of communication that are now around are powerful assets but they do not in any way reduce the flow of paper or the complexity of coordinating activities involved in producing an artifact such as a book. Instead the reverse seems to be true. Obviously the use of such tools requires considerable skill at the center of coordination to borrow an expression from a chapter in this volume. As editors we have been fortunate to have Ms Lotta Strand, Linköping University at the center of the distributed activity that producing this volume has required over the last few years. With her considerable skill and patience Ms Strand and her work provide a powerful illustration of the main thrust of most of the chapters in this volume.

Web Anatomy Robert Hoekman Jr., Jared Spool, 2009-12-09. At the start of every web design project the ongoing struggles reappear. We want to design highly usable and self-evident applications but we also want to devise innovative, compelling and exciting interactions that make waves in the market. Projects are more sophisticated than ever but we have fewer resources with which to complete them. Requirements are fuzzy at best but we're expected to have everything done yesterday. What we need is a reuse strategy coupled with a pathway to innovation. Patterns are part of the game. Components take us further. In *Web Anatomy: Interaction Design Frameworks That Work*, user experience experts Hoekman and Spool introduce interaction

design frameworks the third and final piece of what they call The Reuse Trinity and resolve these issues once and for all Frameworks are sets of design patterns and other elements that comprise entire systems and in this game changing book Hoekman and Spool show you how to identify document share use and reap the benefits of frameworks They also dive deep into several major frameworks to reveal how the psychology behind these standards leads not only to effective designs but can also serve as the basis for cutting edge innovations and superior user experiences Web Anatomy delivers A complete guide to using interaction design frameworks An examination of the psychology behind major frameworks A thorough look at how frameworks will change the way you work for the better Citing examples from both the successful and not so successful the authors break down the elements that comprise several common interactive web systems discuss implementation considerations offer examples of innovations based on these standards reveal how frameworks work hand in hand with patterns and components and show you how to integrate frameworks into your process Read Web Anatomy now Benefit from it for years to come Jared Spool is a world renowned design researcher and the founder of UIE com Robert Hoekman Jr is a veteran user experience specialist and the author of Designing the Obvious and Designing the Moment Best Practices for Graphic Designers, Color Works Eddie Opara, John Cantwell, 2014 This is the go to guide for designers as it outlines and details the essential color design skills needed to create successful meaningful and aesthetically compelling designs Along with hands on projects it offers unique insights into strategy and business when working in the real world with real clients Color Works starts with basic information on color practices and fundamentals and then delves more deeply into theory and application on a project by project basis Illustrated with real world projects and case studies this book offers a behind the scenes take on the design process and the necessary steps to go from concept to final outcome including the challenges encountered along the way
