appearance of mapping class groups in mathematics is ubiquitous The book presents 23 papers containing problems about
mapping class groups the moduli space of Riemann surfaces Teichmuller geometry and related areas Each paper focusses
completely on open problems and directions The problems range in scope from specific computations to broad programs The
goal is to have a rich source of problems which have been formulated explicitly and accessibly The book is divided into four
parts Part I contains problems on the combinatorial and co homological group theoretic aspects of mapping class groups and
the way in which these relate to problems in geometry and topology Part II concentrates on connections with classification
problems in 3 manifold theory the theory of symplectic 4 manifolds and algebraic geometry A wide variety of problems from
understanding billiard trajectories to the classification of Kleinian groups can be reduced to differential and synthetic
geometry problems about moduli space Such problems and connections are discussed in Part III Mapping class groups are
related both concretely and philosophically to a number of other groups such as braid groups lattices in semisimple Lie
groups and automorphism groups of free groups Part IV concentrates on problems surrounding these relationships This book
should be of interest to anyone studying geometry topology algebraic geometry or infinite groups It is meant to provide
