The book provides comprehensive information about the different aspects of veterinary nutrition in tropical countries. The introductory chapter discusses the importance of nutrition, feeds, and feeding of balanced and optimum feeds specifically required for the sustenance of life. The second chapter discusses briefly the history of research in animal nutrition. The book further talks about the relationship between the environment and nutrition in animals, the chemical composition of plants and animals, and the various sources of feed for animals. It provides details on the different phases of life cycle in animals and the effect of nutrition on the performance. Various nutrients and their importance in livestock nutrition and production have been illustrated in detail. Various nutrients such as water, carbohydrate, protein, fats, vitamins, minerals, etc. are individually dealt in a separate chapter. The digestive system, digestion, and metabolism of carbohydrates, protein, and fats in ruminant and non-ruminant livestock have been illustrated. A dedicated chapter fully describes the activity of enzymes which are directly involved in nutrition. Also, this book deals with the harmful components of animal feed which are found mainly in the unconventional feeds. The book also provides chapters like partitioning of feed energy and also the therapeutic and clinical nutrition, which are very important for the undergraduate, postgraduate students, and researchers of animal nutrition and livestock production and management. This book is useful for researchers, undergraduate and postgraduate students studying veterinary sciences, animal husbandry, zoology, and biochemistry.
