Sparse Image And Signal Processing Wavelets And Related Geometric Multiscale Analysis:

Sparse Image and Signal Processing Jean-Luc Starck, Fionn Murtagh, Jalal Fadili, 2015-10-14 This thoroughly updated new edition presents state of the art sparse and multiscale image and signal processing. It covers linear multiscale geometric transforms such as wavelet ridgelet or curvelet transforms and non linear multiscale transforms based on the median and mathematical morphology operators. Along with an up to the minute description of required computation it covers the latest results in inverse problem solving and regularization sparse signal decomposition blind source separation in painting and compressed sensing. New chapters and sections cover multiscale geometric transforms for three dimensional data data cubes data on the sphere geo located data dictionary learning and nonnegative matrix factorization. The authors wed theory and practice in examining applications in areas such as astronomy including recent results from the European Space Agency s Herschel mission biology fusion physics cold dark matter simulation medical MRI digital media and forensics. MATLAB and IDL code available online at www.SparseSignalRecipes.info accompany these methods and all applications. **Sparse Image and Signal Processing** Jean-Luc Starck, Fionn Murtagh, Jalal Fadili, 2015-10-14 Presents state of the art sparse and multiscale image and signal processing with applications in astronomy biology MRI media and forensics. *Geometrical Multiresolution Adaptive Transforms* Agnieszka Lisowska, 2014-03-24 Modern image processing techniques are based on multiresolution geometrical methods of image representation. These methods are efficient in sparse approximation of digital images. There is a wide family of functions called simply X lets and these methods can be divided into two groups the adaptive and the nonadaptive. This book is devoted to the adaptive methods of image approximation especially to multismoothlets. Besides multismoothlets several other new ideas are also covered. Current literature considers the black and white images with smooth horizon function as the model for sparse approximation but here the class of blurred multihorizon is introduced which is then used in the approximation of images with multiedges. Additionally the semi anisotropic model of multiedge representation the introduction of the shift invariant multismoothlet transform and sliding multismoothlets are also covered. *Geometrical Multiresolution Adaptive Transforms* should be accessible to both mathematicians and computer scientists. It is suitable as a professional reference for students researchers and engineers containing many open problems and will be an excellent starting point for those who are beginning new research in the area or who want to use geometrical multiresolution adaptive methods in image processing analysis or compression. **Regularized Image Reconstruction in Parallel MRI with MATLAB** Joseph Suresh Paul, Raji Susan Mathew, 2019-11-05 Regularization becomes an integral part of the reconstruction process in accelerated parallel magnetic resonance imaging pMRI due to the need for utilizing the most discriminative information in the form of parsimonious models to generate high quality images with reduced noise and artifacts. Apart from providing a detailed overview and implementation details of various pMRI reconstruction methods *Regularized image reconstruction in parallel MRI with MATLAB* examples interprets regularized image reconstruction in

pMRI as a means to effectively control the balance between two specific types of error signals to either improve the accuracy in estimation of missing samples or speed up the estimation process The first type corresponds to the modeling error between acquired and their estimated values The second type arises due to the perturbation of k space values in autocalibration methods or sparse approximation in the compressed sensing based reconstruction model Features Provides details for optimizing regularization parameters in each type of reconstruction Presents comparison of regularization approaches for each type of pMRI reconstruction Includes discussion of case studies using clinically acquired data MATLAB codes are provided for each reconstruction type Contains method wise description of adapting regularization to optimize speed and accuracy This book serves as a reference material for researchers and students involved in development of pMRI reconstruction methods Industry practitioners concerned with how to apply regularization in pMRI reconstruction will find this book most useful *Computational Photography* Saghi Hajisharif,2020-02-18 The introduction and recent

advancements of computational photography have revolutionized the imaging industry Computational photography is a combination of imaging techniques at the intersection of various fields such as optics computer vision and computer graphics These methods enhance the capabilities of traditional digital photography by applying computational techniques both during and after the capturing process This thesis targets two major subjects in this field High Dynamic Range HDR image reconstruction and Light Field LF compressive capturing compression and real time rendering The first part of the thesis focuses on the HDR images that concurrently contain detailed information from the very dark shadows to the brightest areas in the scenes One of the main contributions presented in this thesis is the development of a unified reconstruction algorithm for spatially variant exposures in a single image This method is based on a camera noise model and it simultaneously resamples reconstructs denoises and demosaics the image while extending its dynamic range Furthermore the HDR reconstruction algorithm is extended to adapt to the local features of the image as well as the noise statistics to preserve the high frequency edges during reconstruction In the second part of this thesis the research focus shifts to the acquisition encoding reconstruction and rendering of light field images and videos in a real time setting Unlike traditional integral photography a light field captures the information of the dynamic environment from all angles all points in space and all spectral wavelength and time This thesis employs sparse representation to provide an end to end solution to the problem of encoding real time reconstruction and rendering of high dimensional light field video data sets These solutions are applied on various types of data sets such as light fields captured with multi camera systems or hand held cameras equipped with micro lens arrays and spherical light fields Finally sparse representation of light fields was utilized for developing a single sensor light field video camera equipped with a color coded mask A new compressive sensing model is presented that is suitable for dynamic scenes with temporal coherency and is capable of reconstructing high resolution light field videos Compressive Imaging: Structure, Sampling, Learning Ben Adcock,Anders C. Hansen,2021-09-16 Accurate robust and fast image

reconstruction is a critical task in many scientific industrial and medical applications Over the last decade image reconstruction has been revolutionized by the rise of compressive imaging It has fundamentally changed the way modern image reconstruction is performed This in depth treatment of the subject commences with a practical introduction to compressive imaging supplemented with examples and downloadable code intended for readers without extensive background in the subject Next it introduces core topics in compressive imaging including compressed sensing wavelets and optimization in a concise yet rigorous way before providing a detailed treatment of the mathematics of compressive imaging The final part is devoted to recent trends in compressive imaging deep learning and neural networks With an eye to the next decade of imaging research and using both empirical and mathematical insights it examines the potential benefits and the pitfalls of these latest approaches Path Integrals in Stochastic Engineering Dynamics Ioannis A.

Kouglioumtzoglou, Apostolos F. Psaros, Pol D. Spanos, 2024-06-05 This book organizes and explains in a systematic and pedagogically effective manner recent advances in path integral solution techniques with applications in stochastic engineering dynamics It fills a gap in the literature by introducing to the engineering mechanics community for the first time in the form of a book the Wiener path integral as a potent uncertainty quantification tool Since the path integral flourished within the realm of quantum mechanics and theoretical physics applications most books on the topic have focused on the complex valued Feynman integral with only few exceptions which present path integrals from a stochastic processes perspective Remarkably there are only few papers and no books dedicated to path integral as a solution technique in stochastic engineering dynamics Summarizing recently developed techniques this volume is ideal for engineering analysts interested in further establishing path integrals as an alternative potent conceptual and computational vehicle in stochastic engineering dynamics **Ultrametric Pseudodifferential Equations and Applications** Andreĭ IĭUĭr'evich
