Spatial Optimization In Ecological Applications:

Spatial Optimization in Ecological Applications John Hof, Michael Bevers, 2002-05-23 Whether discussing habitat placement for the northern spotted owl or black tailed prairie dog or strategies for controlling exotic pests this book explains how capturing ecological relationships across a landscape with pragmatic optimization models can be applied to real world problems Using linear programming Hof and Bevers show how it is possible for the researcher to include many thousands of choice variables and many thousands of constraints and still be quite confident of being able to solve the problem in hand with widely available software The authors emphasis is to preserve optimality and explore how much ecosystem function can be captured stressing the solvability of large problems such as those in real world case studies **Spatial Optimization in**

Tisdell, 2015-10-30 The stock of the world s biological diversity and the state of its ecosystems are major determinants of the availability of commodities both essential and desirable for human life This leading edge study provides an overarching and balanced approach to the economics of biological conservation considering man made and natural components and their interdependence Recognising the deficiencies of many

contemporary studies which focus almost entirely on natural capital Clement Tisdell utilizes the concept of heritage biological capital including germplasm as part of his analysis of changes in the stock of biological capital This comprehensive synthesis casts doubt upon some propositions and policies for resource conservation recommended by eminent ecologists in areas such as GM crops and livestock husbandry as well as agroecosystems and the concept of sustainable agricultural intensification The propositions presented are lent strength by the author s decision to relate his analysis to pertinent contemporary institutional developments and scientific advances The broad scope and rational scepticism with which this book has been compiled make it an ideal read for economists interested in ecological and environmental economics natural scientists with an interest in biodiversity conservation and higher level policy makers in ecological and environmental fields
