Spatial Processing in Navigation, Imagery and Perception Fred W. Mast, Lutz Jäncke, 2007-06-13 Spatial Processing in Navigation Imagery and Perception Since the decade of the brain cognitive processes have found their way to the study of brain functions and an increasing number of research studies are dealing with the aspect of spatial processing In fact a tremendous part of the cognitive domains studied pertain to spatial processing However there is also a growing tendency for diversification in relation to the subprocesses underlying spatial processing Not only are there studies looking at the well known place cells in rats rabbits and other animals there is also an increasing number of studies looking at related topics in humans and monkeys such as spatial orientation spatial construction and spatial imagery These studies although diverse at first glance have many aspects in common We are now on the root to understand the underlying neuroanatomy and neurophysiology much better than ever before This is made possible by the advent of novel techniques such as structural and functional in vivo anatomy modeling and several sophisticated behavioral research tools such as virtual reality techniques and simulators Spatial processing is fundamental for understanding human cognition However compared to other domains such as memory language and attention the exploration of spatial functions has been understudied in the past years *From Mental Imagery to Spatial Cognition and Language* Valérie Gyselinck, Francesca Pazzaglia, 2012-10-02 The nature of mental images and their relation to language has caused controversy amongst psychologists for years and the so called imagery debate is still unresolved Fresh light is now being shed on this topic using recent findings in neuroscience and the development of behavioural studies Reviewing state of the art research in the field of imagery visuo spatial memory spatial representation and language with special emphasis on their interactions the volume shows how and to what extent findings from the studies on imagery can positively influence and enrich other psychological areas such as Working memory Space and time representation Language and embodiment Chapter 9 written by Michel Denis to whom this book is dedicated analyses more than three decades of research and outlines the shared scientific journey of friendship and discovery that has developed across various cognitive topics all of which are linked to and inspired by imagery conceptualization This is the only book to present a critical outline of research on these topics in a single volume and as such will be invaluable to advanced undergraduates postgraduates and researchers in such fields as cognitive psychology neuroscience computer science and neuropsychology *The Oxford Handbook of Synesthesia* Julia Simner, Edward M. Hubbard, 2018-10-23 Synesthesia is a fascinating phenomenon which has captured the imagination of scientists and artists alike This title brings together a broad body of knowledge about this condition into one definitive state of the art handbook **Representing Space in Cognition** Thora Tenbrink, Jan M. Wiener, Christophe Claramunt, 2013-10 This book considers how people talk about their environment find their way in new surroundings and plan routes Leading scholars and researchers in psychology linguistics computer science and geography show how empirical research can be used to inform formal approaches towards the development of
