Spatial Resilience In Social Ecological Systems:

Spatial Resilience in Social-Ecological Systems Graeme S. Cumming, 2011-02-09 Spatial Resilience is a new and exciting area of interdisciplinary research. It focuses on the influence of spatial variation including such things as spatial location, context, connectivity, and dispersal on the resilience of complex systems and on the roles that resilience and self-organization play in generating spatial variation. Prof. Cumming provides a readable introduction and a first comprehensive synthesis covering the core concepts and applications of spatial resilience to the study of social ecological systems. The book follows a trajectory from concepts through models, methods, and case study analysis before revisiting the central problems in the further conceptual development of the field. In the process, the author ranges from the movements of lions in northern Zimbabwe to the urban jungles of Europe and from the collapse of past societies to the social impacts of modern conflict. The many case studies and examples discussed in the book show how the concept of spatial resilience can generate valuable insights into the spatial dynamics of social ecological systems and contribute to solving some of the most pressing problems of our time. Although it has been written primarily for students, this book will provide fascinating reading for interdisciplinary scientists at all career stages as well as for the interested public. Graeme Cumming, central in the development of resilience thinking and theory, has produced a wonderful book on spatial resilience, the first ever on this topic. The book will become a shining star, a classic in the explosion of new ideas and approaches to studying and understanding social ecological systems. Carl Folke, Stockholm Resilience Centre, Sweden. *Social-Ecological Systems in Transition* Shoko Sakai, Chieko Umetsu, 2014-08-12 This book presents an overview of current knowledge about social ecological systems (SESs), a productive new field dedicated to understanding the relationships between human society and nature. To make the reader aware of how SESs are necessary to maintain our society, the book begins with a broad perspective about what social ecological systems are and what the related research issues in this field are as well. The second part discusses how human activities have changed ecosystems from temperate grasslands to tropical areas. The third part focuses on the adaptability of societies to unpredictable fluctuation in ecosystems, while the last part summarizes factors for the resilience of society against social and ecological shocks. Human activities have severely degraded most natural ecosystems, which are now in critical condition. Various approaches have been developed to improve the SESs to understand environmental problems and explore better ways to increase the sustainability both of ecosystems and of human societies. However, a clear perspective on how to address such problems is still lacking. Part of the difficulty arises because of the diversity and complexity of ecosystems and human societies. Another important factor is the effect of extremely rapid changes in the social and economic characteristics of social ecological systems. Consequently, adaptability and resilience clearly are essential for the sustainability of SESs. Although there is no one direct method to achieve high adaptability and resilience, a possible way is to compare and understand the diverse problems associated with differing social ecological systems. This published work makes a useful contribution to a greater

understanding of the way that essential social responses linked to changes in ecosystems can potentially stimulate further research on this important and interesting subject The book will attract the attention of scholars in environmental sciences ecology and sociology and indeed of anyone interested in the concept of social ecological systems **Resilience and the Cultural Landscape** Tobias Plieninger, Claudia Bieling, 2012-10-18 By linking these research communities this book develops a new perspective on landscape changes **Agent-Based Models and Complexity Science in the Age of Geospatial Big Data** Liliana Perez, Eun-Kyeong Kim, Raja Sengupta, 2017-10-17 This book contains a selection of papers presented during a special workshop on Complexity Science organized as part of the 9th International Conference on GIScience 2016 Expert researchers in the areas of Agent Based Modeling Complexity Theory Network Theory Big Data and emerging methods of Analysis and Visualization for new types of data explore novel complexity science approaches to dynamic geographic phenomena and their applications addressing challenges and enriching research methodologies in geography in a Big Data Era **Socio-ecological Studies in Natural Protected Areas** Alfredo Ortega-Rubio, 2020-11-01 This book explores the interactions of local inhabitants and environmental systems in the Protected Natural Areas of Mexico Its goal is to help understand how social groups contextualize ecological knowledge how human activities contribute to modifying the environmental matrix how cultural and economic aspects influence the use management and conservation of their ecological environment and how social phenomena are to be viewed against the backdrop of ecological knowledge The book reviews the epistemological and historical bases of the socio ecological relationship and addresses the evolution of human natural systems From a methodological standpoint it assesses the tools required for the integration of human and natural dimensions in the management of the environmental matrix Further in the case studies section it reviews valuable recent experiences concerning the retro interactions of local inhabitants with their environmental matrix Given its scope the book offers a valuable asset for researchers and professionals all over the world especially those working in Latin American countries **Coastal Management Revisited** Bernhard Glaeser, Marion Glaser, 2023-01-31 The book presents an overview and historic perspectives of a novel scientific field coming of age today coastal and ocean management It covers diverse and changing issues ranging from conflict resolution to governance and ethical political imperatives natural disasters and climate change culminating in coastal and ocean typologies the basis for a future theory of coasts and oceans Eighteen chapters written by two main authors in cooperation with international experts review 25 years of research The authors address challenges to society related to global change issues that have been generated by human activity in both temperate Sweden Germany and the United States and tropical regions Brazil Indonesia Ultimately the book documents the maturation of a field and responds to changing societal needs and scientific outlooks It gathers recent analyses along with important earlier research with a foreword by Biliana Cicin Sain and Richard Delaney globally renowned as coastal and ocean experts in theory and practice Its broad approach makes the book a must read for graduate and postgraduate students as well as coastal
