Evidence Based Practice Approach like its predecessor provides clinical psychologists in training with a comprehensive practice handbook to help build the skills necessary to complete a clinical placement in the field of adult mental health. While practical in orientation, the book is based solidly on empirical evidence. Building on the success of the previous edition, this handbook has been extensively revised in a number of ways. Throughout the book, the text, references, and website addresses have been updated to reflect important developments since the publication of the first edition. Recent research findings on the epidemiology, aetiology, course, outcome, assessment, and treatment of all psychological problems considered in this volume have been incorporated into the text. Account has been taken of changes in the diagnosis and classification of psychological problems reflected in the DSM 5. Chapters on ADHD in adults, emotion focused therapy, radically open dialectical behaviour therapy, and schema therapy have been added. The book is divided into 6 sections. Section 1 covers conceptual frameworks for practice, lifespan development, classification, and epidemiology. CBT, psychodynamic, emotion focused, systemic, and bio medical models, and general assessment procedures. Section 2 deals with mood problems: depression, bipolar disorder, suicide risk, and anger management. Section 3 focuses on anxiety problems: social phobia, generalized anxiety disorder, panic disorder, obsessive compulsive disorder, post traumatic stress disorder, and depersonalization disorder. Section 4 deals with psychological problems linked to physical health: health anxiety, somatization, chronic pain, adjustment to cancer, and eating disorders. Section 5 focuses on other significant psychological problems that come to the attention of clinical psychologists in adult mental health services: ADHD in adults, alcohol and other drug problems, psychosis, and psychological problems in older adults. Section 6 contains chapters on therapeutic approaches to psychological distress related to complex childhood trauma, dialectical behaviour therapy for borderline personality disorder, racially open dialectical behaviour therapy for over controlled presentations, and schema therapy. Each of the chapters on clinical problems explains how to assess and treat the condition in an evidence based way, with reference to case material. Interventions from cognitive behavioural, psychodynamic, interpersonal, systemic, and biomedical approaches are described where there is evidence that they are effective for the problem in question. Skill building exercises and further reading for psychologists and patients are included at the end of each chapter. This book is one of a set of three volumes which cover the lion's share of the curriculum for clinical psychologists in training in the UK and Ireland. The other two volumes are the Handbook of Child and Adolescent Clinical Psychology, Third Edition, by Alan Carr, and the Handbook of Intellectual Disability and Clinical Psychology Practice, Second Edition, edited by Alan Carr, Christine Linehan, Gary O'Reilly, Patricia Noonan Walsh, and John McEvoy. Treating Substance Abuse Scott T. Walters, Frederick Rotgers, 2011-12-13. Widely adopted, this state of the art work is grounded in the best available knowledge about substance abuse and its treatment. The editors and contributors are leading authorities who provide a complete introduction to each of today's major evidence based treatment approaches, from conceptual underpinnings to clinical applications. The third edition has been revised and updated to reflect significant advances in

research theory and technique Entirely new chapters cover the biology of substance use disorders treatment in primary care settings and case management The third edition retains the structure that makes the book so popular as a course text and practitioner resource Following an introductory overview paired chapters focus respectively on the theory and practice of each approach including motivational contingency management cognitive behavioral 12 step family and pharmacological models Theory chapters explain basic assumptions about how people develop maintain and recover from substance use disorders and concisely review the research support for each approach Practice chapters then offer a start to finish view of treatment covering such crucial topics as the therapeutic relationship assessment procedures goal setting the sequencing of interventions how denial and resistance are addressed the role of self help groups and strategies for preventing and dealing with relapse Illustrative case examples are included The volume concludes with three chapters on integrating different techniques to meet patients needs in a range of clinical settings Written for a broad audience this book is an essential text for courses in substance abuse treatment and addiction counseling Experienced substance abuse clinicians including clinical psychologists clinical social workers psychiatric nurses counselors and psychiatrists will find it a valuable reference for staying up to date on current treatment approaches
