A Blueprint for the Regulation of Artificial Intelligence Technologies Frank Wolf,2023-11-25

The technology of Artificial Intelligence is here and moving fast without ethical standards in place

A Blueprint for the Regulation of Artificial Intelligence Technologies leans on classical western philosophy for its ethical grounding

Values such as conscience rights equity and discrimination establish a basis for regulatory standards

Multiple international agencies with governing interests are compared

The development of ethical standards is suggested through two new non governmental organizations NGOs

The first is to develop standards that evolve from practice while the second acts as an ombudsman to settle abuse

Both NGOs are envisioned to cooperate with regulators

More than seeking a perfect solution the book aims to balance the tension between

conflicting interests with the goal to keep this dangerously wonderful technology under global human control For that to materialize the technology needs to have a seat on the table of global ethics The final chapter lists fourteen thinking points to achieve an ethics balance for new technologies
