Tangible Modeling Open Source Gis:

Tangible Modeling with Open Source GIS Anna Petrasova, Brendan Harmon, Vaclav Petras, Payam Tabrizian, Helena Mitasova, 2018-05-11 This book provides an overview of the latest developments in the fast growing field of tangible user interfaces. It presents a new type of modeling environment where the users interact with geospatial data and simulations using a 3D physical landscape model coupled with a 3D rendering engine. Multiple users can modify the physical model while it is being scanned, providing input for geospatial analysis and simulations. The results are then visualized by projecting images or animations back on the physical model while photorealistic renderings of human views are displayed on a computer screen or in a virtual reality headset. New techniques and software which couple the hardware set up with open source GRASS GIS and Blender rendering engine make the system instantly applicable to a wide range of applications in geoscience education, landscape design, computer games, stakeholder engagement and many others. This second edition introduces a new, more powerful version of the tangible modeling environment with multiple types of interaction including polymeric sand molding, placement of markers and delineation of areas using colored felt patches. Chapters on coupling tangible interaction with 3D rendering engine and immersive virtual environment and a case study integrating the tools presented throughout this book demonstrate the second generation of the system: Immersive Tangible Landscape, that enhances the modeling and design process through interactive rendering of modeled landscape. This book explains the main components of the Immersive Tangible Landscape System and provides the basic workflows for running the applications. The fundamentals of the system are followed by a series of example applications in geomorphometry, hydrology, coastal and fluvial flooding, fire spread, landscape and park design, solar energy, trail planning and others. Graduate and undergraduate students and educators in geospatial science, earth science, landscape architecture, computer graphics and games, natural resources and many other disciplines will find this book useful as a reference or secondary textbook. Researchers who want to build and further develop the system will most likely be the core audience, but also anybody interested in geospatial modeling applications. Hazard risk management, hydrology, solar energy, coastal and fluvial flooding, fire spread, landscape and park design will want to purchase this book.

Tangible Modeling with Open Source GIS Anna Petrasova, Brendan Harmon, Helena Mitasova, 2015 This book presents a new type of modeling environment where users interact with geospatial simulations using 3D physical models of studied landscapes. Multiple users can alter the physical model by hand during scanning, thereby providing input for simulation of geophysical processes in this setting. The authors have developed innovative techniques and software that couple this hardware with open source GRASS GIS, making the system instantly applicable to a wide range of modeling and design problems. Since no other literature on this topic is available, this book fills a gap for this new technology that continues to grow. Tangible Modeling with Open Source GIS will appeal to advanced level students studying geospatial science, computer science and earth science such as landscape architecture and natural resources. It will also benefit researchers and

professionals working in geospatial modeling applications computer graphics hazard risk management hydrology solar energy coastal and fluvial flooding fire spread landscape park design and computer games
