Microbiota and Biofertilizers Khalid Rehman Hakeem, Gowhar Hamid Dar, Mohammad Aneesul Mehmood, Rouf Ahmad Bhat, 2020-12-07 An increasing population has put tremendous pressure on agricultural productivity to fulfill the demands of human consumption Numerous agricultural activities and techniques have been developed to raise annual crop production globally While agriculture has succeeded in enhancing the yearly crop productivity this achievement is at the cost of environmental degradation by applying synthetic persistent substances such as industrial fertilizers pesticides herbicides etc Chemical fertilizers are nearly as destructive as they are productive causing monocultures and consequences associated with elimination of diversity nutrient pollution as evidenced by algae blooms eutrophication water quality issues lower oxygen levels and dangers to fish stocks Therefore the scientific approach to maintain sustainable fertility in soil and plants is to switch over to biofertilisers Biofertilisers are compounds of organic matter that are applied to crops for growth and health Their constituent micro organisms interact in an ecofriendly manner with the soil root and seeds of plants promoting the growth of micro flora that enhances soil fertility They are known to play a number of vital roles in soil fertility crop productivity and production in agriculture Application of biofertilisers results in increased mineral and water uptake root development vegetative growth and nitrogen fixation They liberate growth promoting substances and vitamins and help to maintain soil fertility They act as antagonists and play a pivotal role in neutralising the soil borne plant pathogens thereby assisting in the bio control of diseases Application of biofertilisers in lieu of synthetic fertilizers could be the promising technique to raise agricultural productivity without degrading the environmental quality The present book focuses on the latest research approaches and updates from the microbiota ecosystem and their applications in agriculture industry It also highlights the great potential and possible future of action of microbiota in the development of sustainable agricultural systems

Just Enough Matthew Ingleby, Samuel

Randalls,2018-09-19 This book fosters a wide ranging and nuanced discussion of the concept of enough Acknowledging the prominence of notions of sufficiency in debates about sustainability it argues for a more complex culturally and historically informed understanding of how these might be manifested across a wide array of contexts Rather than simply adding further case studies of sufficiency in order to prove the efficacy of what might be called finite planet economics the book holds up to the light a crucial keyword within the sustainability discourse tracing its origins and anatomising its current repertoire of usages Chapters focus on the sufficiency of food drink and clothing to track the concept of enough from the Middle Ages to the 21st century By expanding the historical and cultural scope of sufficiency this book fills a significant gap in the current market for authors students and the wider informed audience who want to more deeply understand the changing and developing use of this term

Degrowth in the Suburbs Samuel Alexander,Brendan Gleeson,2018-09-21 This book addresses a central dilemma of the urban age how to make the vast suburban landscapes that ring the globe safe and sustainable in the face of planetary ecological crisis The authors argue that degrowth a planned contraction of economic overshoot is the only feasible principle for suburban renewal They depart from the anti suburban sentiment of much environmentalism to show that existing suburbia can be the centre ground of transition to a new social dispensation based on the principle of self limitation The book offers a radical new urban imaginary that of degrowth suburbia which can arise Phoenix like from the increasingly stressed cities of the affluent Global North and guide urbanisation in a world at risk This means dispensing with much contemporary green thinking including blind faith in electric vehicles and high density urbanism and accepting the inevitability and the benefits of planned energy descent A radical but necessary vision for the times
