Life in Media Mark Deuze, 2023-07-25 A new way to teach media studies that centers students' lived experiences and diverse perspectives from around the world. From the intimate to the mundane, most aspects of our lives—how we learn, love, work, and play—take place in media. Taking an expansive global perspective, this introductory textbook covers what it means to live in rather than with media. Mark Deuze focuses on the lived experience: how people who use smartphones, the internet, and television sets make sense of their digital environment to investigate the broader role of media in society and everyday life. *Life in Media* uses relatable examples and case studies from around the world to illustrate the foundational theories, concepts, and methods of media studies. The book is structured around six core themes: how media inform and inspire our daily activities; how we live our lives in the public eye; how we make distinctions between real and fake; how we seek and express love; how we use media to effect change; how we create media and shared narratives; and how we seek to create well-being within media. By deliberately including diverse voices and radically embracing the everyday and mundane aspects of media life, this book innovates ways to teach and talk about media. Highlights diverse international voices, images, and cases. Uses accessible examples from everyday life to contextualize theory. Offers a comprehensive student-centered introduction to media studies. Extensively annotated bibliography offers dynamic sources for further study, including readings and documentary films.

unnoticeable Turkish Policy Quarterly TPQ was published for the first time in February 2002 We are celebrating its 20th anniversary with this issue While much has changed since then we believe the values that guide TPQ are as relevant and important as ever There was then and there is now a chance for us all to contribute to a better world TPQ has always adhered to and will continue to adhere to this ideal In return its global audiences have relied on TPQ since the very first day to provide them with credible balanced inter disciplinary and independent coverage TPQ s evolution has been complex involving constant efforts to understand new technologies and redefine fundamental concepts within the realm of policy Over the last two decades TPQ faced numerous challenges as the world experienced devastating depressions wars and economic and cultural changes as it became widely regarded as an influential journal This really had nothing to do with luck TPQ team and our great contributing writers have always been accountable for making TPQ s stories come alive Yet the question remains as to how long or short twenty years actually is It wasn t difficult to choose the focus of TPQ s 80th issue Artificial intelligence has fast become part of everyday life and we wanted to understand how it fits into democratic values It was important for us to ask how we can ensure that AI and digital policies will promote broad social inclusion which relies on fundamental rights democratic institutions and the rule of law There seems to be no shortage of principles and concepts that support the fair and responsible use of AI systems yet it s difficult to determine how to efficiently manage or deploy those systems today Merve Hickok and Marc Rotenberg two TPQ Advisory Board members wrote the lead article for this issue In a world where data means power vast amounts of data are collected every day by both private companies and government agencies which then use this data to fuel complex systems for automated decision making now broadly described as Artificial Intelligence Activities managed with these AI systems range from policing to military to access to public services and resources such as benefits education and employment The expected benefits from having national talent capacity and capabilities to develop and deploy these systems also drive a lot of national governments to prioritize AI and digital policies A crucial question for policymakers is how to reap the benefits while reducing the negative impacts of these sociotechnical systems on society Gabriela Ramos Assistant Director General for Social and Human Sciences of UNESCO has written an article entitled Ethics of AI and Democracy UNESCO s Recommendation s Insights In her article she discusses how artificial intelligence AI can affect democracy The article discusses the ways in which Artificial Intelligence is affecting democratic processes democratic values and the political and social behavior of citizens The article notes that the use of artificial intelligence and its potential abuse by some government entities as well as by big private corporations poses a serious threat to rights based democratic institutions processes and norms UNESCO announced a remarkable consensus agreement among 193 member states creating the first ever global standard on the ethics of AI that could serve as a blueprint for national AI legislation and a global AI ethics benchmark Paul Nemitz Principal Adviser on Justice Policy at the EU Commission addresses the question of what drives democracy In his view technology has undoubtedly shaped democracy However technology as

well as legal rules regarding technology have shaped and have been shaped by democracy This is why he says it is essential to develop and use technology according to democratic principles He writes that there are libertarians today who purposefully design technological systems in such a way that challenges democratic control It is however clear that there is enough counterpower and engagement at least in Europe to keep democracy functioning as long as we work together to create rules that are sensible for democracy's future and confirm democracy's supremacy over technology and business interests Research associate at the University of Oxford and Professor at European University Cyprus Paul Timmers writes about how AI challenges sovereignty and democracy AI is wonderful AI is scary AI is the path to paradise AI is the path to hell What do we make of these contradictory images when in a world of AI we seek to both protect sovereignty and respect democratic values Neither a techno utopian nor a dystopian view of AI is helpful The direction of travel must be global guidance and national or regional AI law that stresses end to end accountability and AI transparency while recognizing practical and fundamental limits Tania Sourdin Dean of Newcastle Law School Australia asks what if judges were replaced by AI She believes that although AI will increasingly be used to support judges when making decisions in most jurisdictions there will also be attempts over the next decade to totally replace judges with AI Increasingly we are seeing a shift towards Judge AI and to a certain extent we are seeing shifts towards supporting Judge AI which raises concerns related to democratic values structures and what judicial independence means The reason for this may be partly due to the systems used being set up to support a legal interpretation that fails to allow for a nuanced and contextual view of the law Pam Dixon Executive Director of the World Privacy Forum writes about biometric technologies She says that biometric technologies encompass many types or modalities of biometrics today such as face recognition iris recognition fingerprint recognition and DNA recognition both separately and in combination A growing body of law and regulations seeks to mitigate the risks associated with biometric technologies as they are increasingly understood as a technology of concern based on scientific data We invite you to learn more about how our world is changing As a way to honor this milestone we have assembled a list of articles from around the world from some of the best experts in their field This issue would not be possible without the assistance of many people In addition to the contributing authors there were many other individuals who contributed greatly TPQ's team is proud to present you with this edition
