The Knowledge How To Rebuild Our World From Scratch:

The Knowledge Lewis Dartnell, 2015-03-05 Maybe it was a viral pandemic or an asteroid strike or perhaps nuclear war Whatever the cause the world as we know it has ended and you and the other survivors must start again What key knowledge would you need to start rebuilding civilisation from scratch Once you've scavenged what you can how do you begin producing the essentials How do you grow food generate power prepare medicines or get metal out of rocks Could you avert another Dark Ages or take shortcuts to accelerate redevelopment Living in the modern world we have become disconnected from the basic processes that support our lives as well as the beautiful fundamentals of science that enable you to relearn things for yourself *The Knowledge* is a journey of discovery a book which explains everything you need to know about everything This is a quickstart guide for rebooting civilisation which will transform your understanding of the world and help you prepare for when it's no longer here <http://theknowledge.org> *The Knowledge* Lewis Dartnell, 2014-04-17

How would you go about rebuilding a technological society from scratch If our technological society collapsed tomorrow what would be the one book you would want to press into the hands of the postapocalyptic survivors What crucial knowledge would they need to survive in the immediate aftermath and to rebuild civilization as quickly as possible Human knowledge is collectively distributed across the population It has built on itself for centuries becoming vast and increasingly specialized Most of us are ignorant about the fundamental principles of the civilization that supports us happily utilizing the latest or even the most basic technology without having the slightest idea of why it works or how it came to be If you had to go back to absolute basics like some sort of postcataclysmic Robinson Crusoe would you know how to re-create an internal combustion engine put together a microscope get metals out of rock or even how to produce food for yourself Lewis Dartnell proposes that the key to preserving civilization in an apocalyptic scenario is to provide a quickstart guide adapted to cataclysmic circumstances *The Knowledge* describes many of the modern technologies we employ but first it explains the fundamentals upon which they are built Every piece of technology rests on an enormous support network of other technologies all interlinked and mutually dependent You can't hope to build a radio for example without understanding how to acquire the raw materials it requires as well as generate the electricity needed to run it But Dartnell doesn't just provide specific information for starting over he also reveals the greatest invention of them all the phenomenal knowledge generating machine that is the scientific method itself *The Knowledge* is a brilliantly original guide to the fundamentals of science and how it built our modern world

Goliath's Curse Luke Kemp, 2025-09-23 A NEXT BIG IDEA CLUB'S MUST READ BOOK A radical retelling of human history through the cycle of societal collapse a Cassandra like warning about the path today's oligarchs have set and a sweeping and dire vision of a world on the brink Publishers Weekly starred review Deeply sobering and strangely inspiring Read it now or your descendants will find it in the ruins Johann Hari author of *Stolen Focus* Anyone who doubts the importance of this conversation hasn't been paying attention Bill McKibben author of *Here Comes the Sun* 12

000 years ago human history changed forever when the egalitarian groups of hunter gathering humans began to settle down and organize themselves into hierarchies The few dominated the many seizing control through violence What emerged were Goliaths large societies built on a collection of hierarchies that are also terrifyingly fragile collapsing time after time across the world Today we live in a single global Goliath one that is precariously interdependent under threat from nuclear war climate change and the existential risks of AI The next collapse may be our last In Goliath s Curse Cambridge scholar Luke Kemp conducts a historical autopsy on our species from the earliest cities to the collapse of modern states like Somalia Drawing on historical databases and the latest discoveries in archaeology and anthropology he uncovers groundbreaking revelations More democratic societies tend to be more resilient A modern collapse is likely to be global long lasting and more dire than ever before Collapse may be invisible until after it has occurred It s possible we re living through one now Collapse has often had a more positive outcome for the general population than for the 1% All Goliaths contain the seeds of their own demise As useful for finding a way forward as it is for diagnosing our precarious present Goliath s Curse is a stark reminder that there are both bright and dark sides to societal collapse that it is not necessarily a reversion to chaos or a dark age and that making a more resilient world may well mean making a more just one *A Theory of Everyone* Michael

Muthukrishna,2025-02-04 A blueprint for a better future that offers a unified theory of human behavior culture and society Playing on the phrase a theory of everything from physics Michael Muthukrishna s ambitious original and deeply hopeful book *A Theory of Everyone* draws on the most recent research from across the sciences humanities and the emerging field of cultural evolution to paint a panoramic picture of who we are and what exactly makes human beings different from all other forms of life on the planet Muthukrishna argues that it is our unique ability to create culture a shared body of knowledge skills and experience passed on from generation to generation that has enabled our current dominance But it is only by understanding and applying the laws of life the need for energy innovation cooperation and evolution that we can solve the practical and existential challenges we face as a species *A Theory of Everyone* attempts to provide solutions for the most pressing problems of our collective future such as polarization inequality the great stagnation in productivity and the energy crisis Casting a bold and wide net Muthukrishna s book is a must read for anyone interested in a better future for ourselves and for generations to come **Postcards from the Anthropocene.** Benek Cincik,Tiago Torres-Campos,2022-04-22

Deep Time Reckoning Vincent Ialenti, 2020-09-22 A guide to long term thinking how to envision the far future of Earth We live on a planet careening toward environmental collapse that will be largely brought about by our own actions And yet we struggle to grasp the scale of the crisis barely able to imagine the effects of climate change just ten years from now let alone the multi millennial timescales of Earth s past and future life span In this book Vincent Ialenti offers a guide for envisioning the planet s far future to become as he terms it more skilled deep time reckoners The challenge he says is to learn to inhabit a longer now Ialenti takes on two overlapping crises the Anthropocene our current moment of human caused environmental transformation and the deflation of expertise today s popular mockery and institutional erosion of expert authority The second crisis he argues is worsening the effects of the first Hearing out scientific experts who study a wider time span than a Facebook timeline is key to tackling our planet s emergency Astrophysicists geologists historians evolutionary biologists climatologists archaeologists and others can teach us the art of long termism For a case study in long term thinking Ialenti turns to Finland s nuclear waste repository Safety Case experts These scientists forecast far future glaciations climate changes earthquakes and more over the coming tens of thousands or even hundreds of thousands or millions of years They are not pop culture futurists but data driven disciplined technical experts using the power of patterns to construct detailed scenarios and quantitative models of the far future This is the kind of time literacy we need if we are to survive the Anthropocene

Really Good Schools James Tooley, 2021-04-12 Almost overnight a virus has brought into question America s nearly 200 year old government run K 12 school system and prompted an urgent search for alternatives But where should we turn to find them Enter James Tooley s Really Good Schools A distinguished scholar of education and the world s foremost expert on private low cost innovative education Tooley takes readers to some of the world s most impoverished communities located in some of the world s most dangerous places including India and such war torn countries as Sierra Leone Liberia and South Sudan There in places where education experts fear to tread Tooley finds thriving private schools that government multinational NGOs and even international charity officials deny exist Why Because the very existence of low cost high quality private schools shatters the prevailing myth in the U S U K and western Europe that absent government affordable high quality schools for the poor could not exist But they

do And they are ubiquitous and in high demand Founded by unheralded local educational entrepreneurs these schools are proving that self organized education is not just possible but flourishing often enrolling far more students than free government schools do at prices within reach of even the most impoverished families In the course of his analysis Tooley asks the key questions What proportion of poor children is served How good are the private schools What are the business models for these schools And can they be replicated and improved The evidence is in In poor urban and rural areas around the world children in low cost private schools outperform those in government schools And the schools do so for a fraction of the per pupil cost Ubiquity affordability quality value for money equity choice and sustainability these are the seven categories by which schooling should be judged according to Tooley In every instance one is forced to conclude that low cost non governmental entrepreneurial education as practiced by the poor around the globe contains the key to their rise to prosperity and leadership positions within their own respective cultures Alarmed by recent government barriers in education Americans can now find hope in the triumph in the face of acute adversity of these remarkable schools Because of the pandemic parents in America and Europe are discovering that the education of their children is indeed possible and likely far better without government meddling with rigid seat time mandates outdated school calendars absurd age driven grade levels and worse testing regimes And having experienced the first fruits of educational freedom parents will be increasingly open to the possibilities of ever greater educational entrepreneurship and innovation Thankfully they have Really Good Schools to show the way

On the Future Martin Rees,2021-10-05 A provocative and inspiring look at the future of humanity and science from world renowned scientist and bestselling author Martin Rees Humanity has reached a critical moment Our world is unsettled and rapidly changing and we face existential risks over the next century Various outcomes good and bad are possible Yet our approach to the future is characterized by short term thinking polarizing debates alarmist rhetoric and pessimism In this short exhilarating book renowned scientist and bestselling author Martin Rees argues that humanity s prospects depend on our taking a very different approach to planning for tomorrow The future of humanity is bound to the future of science and hinges on how successfully we harness technological advances to address our challenges If we are to use science to solve our problems while avoiding its dystopian risks we must think rationally globally collectively and optimistically about the long term Advances in biotechnology cybertechnology robotics and artificial intelligence if pursued and applied wisely could empower us to boost the developing and developed world and overcome the threats humanity faces on Earth from climate change to nuclear war At the same time further advances in space science will allow humans to explore the solar system and beyond with robots and AI But there is no Plan B for Earth no viable alternative within reach if we do not care for our home planet Rich with fascinating insights into cutting edge science and technology this accessible book will captivate anyone who wants to understand the critical issues that will define the future of humanity on Earth and beyond
