The Nature And Power Of Mathematics Donald M Davis:

The Nature and Power of Mathematics Donald M. Davis, 2013-03-19 This captivating book explains some of the most fascinating ideas of mathematics to nonspecialists focusing on non Euclidean geometry number theory and fractals Numerous illustrations 1993 edition *Euclidean, Non-Euclidean, and Transformational Geometry* Shlomo Libeskind, Isa S. Jubran, 2024-10-22 This undergraduate textbook provides a comprehensive treatment of Euclidean and transformational geometries supplemented by substantial discussions of topics from various non Euclidean and less commonly taught geometries making it ideal for both mathematics majors and pre service teachers Emphasis is placed on developing students deductive reasoning skills as they are guided through proofs constructions and solutions to problems The text frequently emphasizes strategies and heuristics of problem solving including constructing proofs Where to begin How to proceed Which approach is more promising Are there multiple solutions proofs etc This approach aims not only to enable students to successfully solve unfamiliar problems on their own but also to impart a lasting appreciation for mathematics The text first explores at a higher level and in much greater depth topics that are normally taught in high school geometry courses definitions and axioms congruence circles and related concepts area and the Pythagorean theorem similarity isometries and size transformations and composition of transformations Constructions and the use of transformations to carry out constructions are emphasized The text then introduces more advanced topics dealing with non Euclidean and less commonly taught topics such as inversive hyperbolic elliptic taxicab fractal and solid geometries By examining what happens when one or more of the building blocks of Euclidean geometry are altered students will gain a deeper understanding of and appreciation for Euclidean concepts To accommodate students with different levels of experience in the subject the basic definitions and axioms that form the foundation of Euclidean geometry are covered in Chapter 1 Problem sets are provided after every section in each chapter and include nonroutine problems that students will enjoy exploring While not necessarily required the appropriate use of freely available dynamic geometry software and other specialized software referenced in the text is strongly encouraged this is especially important for visual learners and for forming conjectures and testing hypotheses

Mathematical Mysteries Calvin C. Clawson, 2013-11-09 A meditation on the beauty and meaning of numbers exploring mathematical equations describing some of the mathematical discoveries of the past millennia and pondering philosophical questions about the relation of numbers to the universe *An Introduction to Mathematical Reasoning* Peter J. Eccles, 2013-06-26 This book eases students into the rigors of university mathematics The emphasis is on understanding and constructing proofs and writing clear mathematics The author achieves this by exploring set theory combinatorics and number theory topics that include many fundamental ideas and may not be a part of a young mathematician's toolkit This material illustrates how familiar ideas can be formulated rigorously provides examples demonstrating a wide range of basic methods of proof and includes some of the all time great classic proofs The book presents mathematics as a continually

developing subject Material meeting the needs of readers from a wide range of backgrounds is included The over 250 problems include questions to interest and challenge the most able student but also plenty of routine exercises to help familiarize the reader with the basic ideas

Intellectual Impostures Jean Bricmont, Alan Sokal, 2011-05-26 When *Intellectual Impostures* was published in France it sent shock waves through the Left Bank establishment When it was published in Britain it provoked impassioned debate Sokal and Bricmont examine the canon of French postmodernists Lacan Kristeva Baudrillard Irigaray Latour Virilio Deleuze and Guattari and systematically expose their abuse of science This edition contains a new preface analysing the reactions to the book and answering some of the attacks

[Fashionable Nonsense](#) Alan Sokal, Jean Bricmont, 2025-06-25 In 1996 physicist Alan Sokal published an essay in *Social Text* an influential academic journal of cultural studies touting the deep similarities between quantum gravitational theory and postmodern philosophy Soon thereafter the essay was revealed as a brilliant parody a catalog of nonsense written in the cutting edge but impenetrable lingo of postmodern theorists The event sparked a furious debate in academic circles and made the headlines of newspapers in the U S and abroad In *Fashionable Nonsense* Postmodern Intellectuals Abuse of Science Sokal and his fellow physicist Jean Bricmont expand from where the hoax left off In a delightfully witty and clear voice the two thoughtfully and thoroughly dismantle the pseudo scientific writings of some of the most fashionable French and American intellectuals More generally they challenge the widespread notion that scientific theories are mere narrations or social constructions

Architectures of Chance Dr Yeoryia Manolopoulou, 2013-12-11 Architectural discourse is dominated by a false dichotomy between design and chance and governed by the belief that the architect's role is to defend against the indeterminate this book challenges this position arguing for the need to develop a more creative and spatial understanding of chance as experience critical agency and a design practice in its own right *Architectures of Chance* makes illuminating reading for those interested in aesthetic knowledge design and its limits and the poetics and ethics of chance and space in the overlapping fields of architecture and the aleatoric arts
