Studying Lives Through Time Personality And Development:

Studying Lives Through Time David Charles Funder, American Psychological Association. Science Directorate, Jack Block, American Psychological Association, Radcliffe College. Henry A. Murray Research Center, University of California, Riverside. Center for Family Studies, University of California, Riverside. Department of Psychology, 1993 *The Psychoanalytic Study of Lives Over Time* Jonathan Cohen, Betram J. Cohler, 1999-09-02 The Psychoanalytic Study of Lives Over Time Clinical and Research Perspectives on Children Who Return to Treatment in Adulthood is a landmark volume that addresses an essential clinical question what is the nature of the process and outcome of clinical work with children An internationally renowned group of analytic clinicians and clinician researchers all comment on three fascinating child analytic situations where the patient returned to treatment in adulthood *Lives Through Time* J. Block, 2014-03-05 First published in 1983 The theme of this study is the importance of studying personality development and personality change in a differentiated way of identifying and understanding the alternative paths along which people evolve over time The time is adolescence with its implications for the life that is later led And the method is longitudinal an approach that can respond to questions regarding psychological development not otherwise scientifically accessible **Assessment of Biological Mechanisms Across the Life Span** Lisabeth F. DiLalla, Stephanie M. Clancy Dollinger, Stephanie MC Dollinger, 2013-06-17 Based on the First Biannual Lifespan Development Conference this volume offers a multidisciplinary and multidimensional approach to the study of lifespan development in the areas of neuropsychology cognition behavior genetics and perception The objective of the conference was to provide a lively forum for the discussion of issues related to lifespan development and to reflect on important topics challenging the field during the 1990s The chapters in this book motivated by the conference presentations cover the assessment and evaluation of developmental changes in visual perception the contribution of behavioral genetic factors to development the predictability of perinatal risk factors as they relate to cognitive and linguistic outcomes the neuropsychological changes during aging and innovative approaches to the study of cognitive development using neuropsychological testing methods **The Developing Structure of Temperament and Personality From Infancy To Adulthood** Charles F. Halverson, Jr., Gedolph A. Kohnstamm, Roy P. Martin, Charles F. Halverson, Geldolph A. Kohnstamm, 2014-05-12 This book is the first to bring together researchers in individual differences in personality and temperament to explore whether there is any unity possible between the temperament researchers of infancy and childhood and the major researchers in adult personality Prior to the workshop which resulted in this volume the existing literature seemed to document a growing consensus on the part of the adult personality researchers that five major personality dimensions the Big Five might be sufficient to account for most of the important variances in adult individual differences in personality In contrast to this accord the literature on child and infant individual differences seemed to offer a wide variety of opinions regarding the basic dimensions of difference in personality or temperament The editors believed that they could

encourage researchers from both the adult and child areas to consider the importance of a lifespan conceptualization of individual differences by discussing their research in terms of a continuity approach. Written by some of the most distinguished scholars from Great Britain, continental Western Europe and Eastern Europe as well as the United States and Canada, the chapters present a cross-cultural view of both adult personality and temperament in infancy and childhood. By sharing their recent data, techniques and theoretical speculations, the chapter authors communicate the research enthusiasm engendered by the growing consensus of the adult Big Five as well as the exciting prospects of an integrative program of research from infancy to adulthood that will clarify and consolidate what is now a disparate set of methods, theory and findings across the lifespan. The editors suggest that this volume will have considerable heuristic value in stimulating researchers to conceptualize their work in developmental lifespan approaches that will lead to a consolidation of individual differences research at every age.

Handbook of Adult Development Jack Demick, Carrie Andreoletti, 2012-12-06

This volume is an outgrowth of contemporary research on development over the adult lifespan which by now has burgeoned and developed both nationally and internationally. However, for us the impetus to be involved in this area was spawned and nurtured by our initial association with the Society for Research in Adult Development (SRAD) with its origins some 15 years ago by Michael Commons and his associates in Cambridge, Massachusetts. Through the good will and support of this society, we also became and are still heavily involved with the Journal of Adult Development and the Kluwer Plenum Monograph Series on Adult Development and Aging of which this volume is a companion. Many of the contributions in the volume are from SRAD members who consistently adhere to a focus on positive adult development. Their chapters have been complemented by pieces from other researchers who have adopted more mainstream approaches to adult development and aging. Regardless of the particular approach and/or focus of the chapter, all the work reported herein supports the relatively recent idea that development is not restricted to children and adolescents but continues throughout the adult lifespan in ways that we never envisioned some 20 years ago. Thus, the volume represents the state of the art theory research and practice on adult development which has the potential to occupy us all for some time to come.

Microdevelopment Nira Granott, Jim Parziale, 2002-05-09

Microdevelopment is the process of change in abilities, knowledge and understanding during short time spans. This book presents a new process-oriented view of development and learning based on recent innovations in psychology research. Instead of characterising abilities at different ages, researchers investigate processes of development and learning that evolve through time and explain what enables progress in them. Four themes are highlighted: variability, mechanisms that create transitions to higher levels of knowledge, interrelations between changes in the short-term scale of microdevelopment and the crucial effect of context. Learning and development are analysed in and out of school in the individual's activities and through social interaction in relation to simple and complex problems and in everyday behaviour and novel tasks. With contributions from the foremost researchers in the field, *Microdevelopment* will be essential reading for all interested in cognitive and
