Integrated Product and Process Design and Development Edward B. Magrab, 1997-07-23 The Integrated Product and Process Design and Development IP2D2 method is quickly becoming the new standard for the rapid creation of competitively priced high quality products IP2D2 indicates in the broadest sense the overlapping interacting and iterative nature of all of the aspects of the product realization process The method is a continuous process whereby a product s cost performance and features value and time to market lead to a company s increased profitability and market share This new text reference reflects the sweeping changes this approach has brought to traditional engineering design courses and to industry Carefully organized with sections on each major stage of the approach Integrated Product and Process Design and Development The Product Realization Process is the first complete treatment of this new direction in engineering The book is designed to help you cultivate an attitude toward design that encourages creativity and innovation while considering the equally important considerations of customer requirements and satisfaction quality reliability manufacturing methods and material selection assembly cost the environment and scheduling Extensively class tested in senior and graduate level engineering design courses at the University of Maryland the book gives equal time to conceptual and practical aspects As each concept is introduced and explained two book long examples provide you with a realistic sense of how a product s creation progresses through its various stages Numerous checklists and other practical guidelines help you learn to apply the IP2D2 method to your own work Students and newly graduated engineers will appreciate the modern perspective that more nearly reflects what they will encounter in practice than what is obtainable in traditional texts For more experienced practicing engineers this is the new information they need to keep up with recent rapid changes and stay marketable today and in the future

Revolutions in Development Inquiry Robert Chambers, 2012 Robert Chambers returns with a new book that reviews together for the first time some of the revolutionary changes in the methodologies and methods of development inquiry that have occurred in the past forty years and reflects on their transformative potential for the future This book breaks new ground by describing and analysing the evolution of a sequence of approaches Starting with the dinosaurs of large scale multi subject questionnaire surveys and the biased visits and perceptions of rural development tourism and urban based professionals there follows a look at the explosive proliferation of methodologies and methods of recent years These include rapid rural appraisal RRA participatory rural appraisal PRA and dramatic developments in the still largely unrecognized fields of participatory numbers and statistics and of participatory mapping and GIS Chambers shows how these can empower local people and provide rigorous and valid substitutes for some more traditional methods of inquiry Also presented is a repertoire for offsetting the biases of the urban trap which has become so serious for officials and aid agency

staff Importantly Chambers points out that we are now in a different space methodologically from a few years ago He makes the case that participatory methodologies evolved through creative and eclectic pluralism can be a transformative wave for the future as drivers of personal professional and institutional change This book is for all who are concerned with development regardless of profession discipline or organization who seek to be abreast of the revolutionary breakthroughs in approaches and methods of inquiry of recent years and what Chambers calls their unlimited potentials Published with IDS
