Synthetic Rubbers: Their Chemistry and Technology D.C. Blackley, 2011-11-02 This book has its origin in a proposal made a few years ago that I should collaborate with Dr H J Stern in the production of a third edition of his well known text book entitled Rubber Natural and Synthetic The suggestion was that I should contribute a series of chapters on synthetic rubbers Although in the event it has not proved possible to publish the full book in the form originally planned it was apparent that with some restructuring the material which I had collected would be valuable as an independent summary of the chemistry and technology of synthetic rubbers It is in this form that the material is now offered The primary purpose of this book is to provide a brief up to date survey of the principal types of synthetic rubber which have been and are currently available Two classes of material are included which are regarded by some as being thermoplastics rather than rubbers namely plasticised polyvinyl chloride and the thermoplastic synthetic rubbers The topics which are covered for each main family of synthetic rubbers are i the sources of the monomers ii polymerisation procedures and the effects of important polymerisation variables upon the rubber produced iii the types of rubber currently available commercially iv interesting aspects of the compounding of the rubbers with special reference to such matters as vulcanisation reinforcement protection against degradation and where appropriate plasticisation and v an indication of applications
