Symbol Correspondences For Spin Systems:

Symbol Correspondences for Spin Systems Pedro de M. Rios, Eldar Straume, 2014-10-10 In mathematical physics the correspondence between quantum and classical mechanics is a central topic which this book explores in more detail in the particular context of spin systems that is $SU(2)$ symmetric mechanical systems A detailed presentation of quantum spin j systems with emphasis on the $SO(3)$ invariant decomposition of their operator algebras is first followed by an introduction to the Poisson algebra of the classical spin system and then by a similarly detailed examination of its $SO(3)$ invariant decomposition The book next proceeds with a detailed and systematic study of general quantum classical symbol correspondences for spin j systems and their induced twisted products of functions on the 2 sphere This original systematic presentation culminates with the study of twisted products in the asymptotic limit of high spin numbers In the context of spin systems it shows how classical mechanics may or may not emerge as an asymptotic limit of quantum mechanics The book will be a valuable guide for researchers in this field and its self contained approach also makes it a helpful resource for graduate students in mathematics and physics

Real Spinorial Groups Sebastià Xambó-Descamps, 2018-11-22 This book explores the Lipschitz spinorial groups versor pinor spinor and rotor groups of a real non degenerate orthogonal geometry or orthogonal geometry for short and how they relate to the group of isometries of that geometry After a concise mathematical introduction it offers an axiomatic presentation of the geometric algebra of an orthogonal geometry Once it has established the language of geometric algebra linear grading of the algebra geometric exterior and interior products involutions it defines the spinorial groups demonstrates their relation to the isometry groups and illustrates their suppleness geometric covariance with a variety of examples Lastly the book provides pointers to major applications an extensive bibliography and an alphabetic index Combining the characteristics of a self contained research monograph and a state of the art survey this book is a valuable foundation reference resource on applications for both undergraduate and graduate students

Analysis of NMR Spectra R. A. Hoffman, S. Forsen, B. Gestblom, 2012-12-06 Nuclear magnetic resonance spectroscopy which has evolved only within the last 20 years has become one of the very important tools in chemistry and physics The literature on its theory and application has grown immensely and a comprehensive and adequate treatment of all branches by one author or even by several becomes increasingly difficult This series is planned to present articles written by experts working in various fields of nuclear magnetic resonance spectroscopy and will contain review articles as well as progress reports and original work Its main aim however is to fill a gap existing in literature by publishing articles written by specialists which take the reader from the introductory stage to the latest development in the field The editors are grateful to the authors for the time and effort spent in writing the articles and for their invaluable cooperation The Editors Analysis of NMR Spectra A Guide for Chemists R A HOFFMAN t S FORSEN Division of Physical Chemistry Chemical Center Lund Institute of Technology Lund Sweden B GESTBLOM Institute of Physics University of Uppsala Sweden Contents I Principles of NMR Spectroscopy 4 1 1 The
