Remote Sensing Tools for Exploration Pamela

Elizabeth Clark, Michael Lee Rilee, 2010-07-01 Remote Sensing from a New Perspective The idea for this book began many years ago when I was asked to teach a course on remote sensing Not long before that time I had been part of the effort to develop the first database for planetary data with a common digital array format and interactive processing capabilities to correlate those data easily the lunar consortium All the available lunar remote sensing data were included orbital and ground based ranging across the entire electromagnetic spectrum I had used this powerful tool extensively and in that spirit I was determined to create a course which covered the entire spectrum and a variety of targets As I looked around for the equivalent of a textbook which I was willing to pull together from several sources I realized that available material was very heavily focused on the visual and near visual spectrum and on the Earth as a target Even The Surveillant Science edited by Edward Holz and published in 1973 which broke newground in having diverse articles on most of the spectrum when it was created focused entirely on the Earth My personal favorite the exceedingly well written book on remote sensing by Floyd Sabins first published in 1978 covered the visual infrared and microwave portions of the spectrum beautifully but focused on the Earth as well Unhindered I developed what I called packets of material for each part of the spectrum

Model-oriented Systems Engineering Science Duane W. Hybertson, 2016-04-19 Systems engineering SE is experiencing a significant expansion that encompasses increasingly complex systems However a common body of knowledge on how to apply complex systems engineering CSE has yet to be developed A combination of people and other autonomous agents crossing organization boundaries and continually changing these hybrid systems are less predictable while being more self organizing and adaptive than traditional systems The growing pains of this evolution and the ever widening reach of SE technology require an effective foundation for integrating traditional and complex engineering methods addressing machine and human interaction as well as scaling up and down from nano scale to the macro system of systems level Model oriented Systems Engineering Science A Unifying Framework for Traditional and Complex Systems addresses solutions to that expansion and integration problem This text takes advantage of better understood systems science SS to support the transition identifying and using commonalities between complex systems and other sciences such as biology sociology cognitive science organizational theory and computational science The author defines Model oriented Systems Engineering Science MOSES an organized system that selects appropriate information from these disciplines and unifies it into a coherent framework The result is a seamless approach to the class of systems across the extended scope of the new SE a foundation upon which to develop an enhanced and unified SE Modeling orientation MO provides a common perspective on the entire SES SE enterprise including all supporting sciences engineering for the full range of traditional complex and hybrid systems and their management This book extends existing modeling approaches into an MO that views all science artifacts and engineering artifacts as models of systems It organizes them into a virtual structured repository called the SE model space effectively a container for the accumulating body of SE and SES knowledge in the form of models and patterns By organizing

and integrating all these elements into a common framework the author makes the material not only easily accessible but also immediately applicable and provides a well grounded basis for future growth and evolution of the SE discipline

How to Do Systems Analysis John E. Gibson, William T. Scherer, William F. Gibson, Michael C. Smith, 2016-08-01 Presents the foundational systemic thinking needed to conceive systems that address complex socio technical problems This book emphasizes the underlying systems analysis components and associated thought processes The authors describe an approach that is appropriate for complex systems in diverse disciplines complemented by a case based pedagogy for teaching systems analysis that includes numerous cases that can be used to teach both the art and methods of systems analysis Covers the six major phases of systems analysis as well as goal development the index of performance evaluating candidate solutions managing systems teams project management and more Presents the core concepts of a general systems analysis methodology Introduces motivates and illustrates the case pedagogy as a means of teaching and practicing systems analysis concepts Provides numerous cases that challenge readers to practice systems thinking and the systems methodology
