The Ocean Of Life The Fate Of Man And The Sea:

The Ocean of Life Callum Roberts, 2012-05-24 A Silent Spring for oceans written by the Rachel Carson of the fish world The New York Times Who can forget the sense of wonder with which they discovered the creatures of the deep In this vibrant hymn to the sea Callum Roberts one of the world's foremost conservation biologists leads readers on a fascinating tour of mankind's relationship to the sea from the earliest traces of water on earth to the oceans as we know them today In the process Roberts looks at how the taming of the oceans has shaped human civilization and affected marine life We have always been fish eaters from the dawn of civilization but in the last twenty years we have transformed the oceans beyond recognition Putting our exploitation of the seas into historical context Roberts offers a devastating account of the impact of modern fishing techniques pollution and climate change and reveals what it would take to steer the right course while there is still time Like *Four Fish* and *The Omnivore's Dilemma* *The Ocean of Life* takes a long view to tell a story in which each one of us has a role to play

Dispatches from the South China Sea James Borton, 2022-01-15 The impact of continuous coastal development reclamation destruction of corals overfishing and increased maritime traffic places all of us on the front lines of preserving our oceans Marine biologists who share a common language that cuts across political economic and social differences recognize that the sea's remarkable coral reefs which provide food jobs and protection against storms and floods have suffered unprecedented rates of destruction in recent decades *Dispatches from the South China Sea*'s blend of participatory research and field reportage paves the way for a transformation of policy and provides a basis for the eventual resolution of some of today's major maritime conflicts From overfishing illegal and unregulated fishing coral reef destruction and reclamations *Dispatches from the South China Sea* charts science-driven cooperation opportunities James Borton purposefully and passionately argues that the South China Sea can become a body of water that unites rather than divides
