Optometry: Science, Techniques and Clinical Management E-Book Mark Rosenfield, Nicola Logan, 2016-06-23. An introduction to the theory and practice of optometry in one succinct volume. From the fundamental science of vision to clinical techniques and the management of common ocular conditions, this book encompasses the essence of contemporary optometric practice. Now in full colour and featuring over 400 new illustrations, this popular text which will appeal to both students and practitioners wishing to keep up to date, has been revised significantly. The new edition incorporates recent advances in technology and a complete overview of clinical procedures to improve and update everyday patient care. Contributions from well known international experts deliver a broad perspective and understanding of current optometric practice. A useful aid for students and the newly qualified practitioner while providing a rapid reference guide for the more experienced clinician. Comprehensive and logical coverage detailing the full spectrum of optometric practice in one volume. Succinctly covers the basics of anatomy, physiology, pharmacology, investigative techniques and clinical management of common eye conditions to provide key topics likely to be met in clinical practice. Discusses the full range of refractive correction from spectacles and contact lenses to surgical treatment. Includes chapters on the management of special populations including paediatric, elderly, low vision and special needs patients. Heavily illustrated throughout with key diagrams and images to support the text. Complete restructuring of contents into three sections: basic sciences, clinical techniques and patient management. Full colour throughout with over 400 illustrations. Many new chapters reflecting the changes in optometric practice and technology over the last 20 years, including new imaging and diagnostic procedures and methods of ocular treatment and refractive correction. Now includes internationally renowned authors from around the world. Details a full range of refractive and management approaches for patient care.

Assessing Ocular Toxicology in Laboratory Animals Andrea B Weir, Margaret Collins, 2012-12-04. Ocular toxicity is routinely assessed in toxicology studies conducted for regulatory purposes. Ocular anatomy and physiology and the assessment of ocular toxicity itself can be challenging to scientists involved in the safety assessment of pharmaceuticals, pesticides and other agents. Anatomical and physiological differences between species can impact the nature of ocular effects observed following intended or unintended exposure of ocular tissues to xenobiotics. *Ocular Toxicity in Laboratory Animals* provides a concise reference addressing ocular anatomy and physiology across species that will enhance the design and interpretation of toxicology studies conducted for regulatory purposes. The book provides an overview of routine and advanced techniques that are used to assess ocular toxicity, including slit lamp biomicroscopy, indirect ophthalmoscopy, electrophysiology and imaging methods for the anterior and posterior segments of the eye. Additionally, the book defines the

regulatory expectations for pharmaceuticals intended to treat ocular diseases and for other non pharmaceutical regulated chemicals With contributions from experts in the field Ocular Toxicity in Laboratory Animals is an authoritative accessible guide for toxicologists and other scientists involved in conducting toxicology studies for regulatory purposes and or reviewing data from such studies *Diagnosis and Management of Ocular Motility Disorders* Alec M. Ansons, Helen Davis, 2008-04-30

The aim of this book has always been to give guidance on the diagnosis and treatment of ocular motility disorders based on clinical experience as opposed to a comprehensive treatise on the subject drawn from the primary literature The Third Edition sees a new team of authors who have kept very much to this principle in their nevertheless thorough revision of the book Whilst there are no new chapters as such the immediate impact of the revision is in the improved page layout with increased use of diagrams and flowcharts There are new sections on feigned visual loss in adults and children the management of residual defects and the section on botulinum toxin treatment in chapter 8 will be re written to take account of the great advances in this form of treatment
