Single Page Web Applications Michael Mikowski, Josh Powell, 2013-09-19 Summary In *Single Page Web Applications* you'll learn to build modern browser based apps that take advantage of stronger client platforms and more predictable bandwidth. You'll learn the SPA design approach and then start exploring new techniques like structured JavaScript and responsive design. And you'll learn how to capitalize on trends like server side JavaScript and NoSQL data stores as well as new frameworks that make JavaScript more manageable and testable as a first class language. About this Book If your website is a jumpy collection of linked pages you are behind. Single page web applications are your next step pushing UI rendering and business logic to the browser and communicating with the server only to synchronize data. They provide a smooth user experience much like a native application. But SPAs can be hard to develop, manage and test. *Single Page Web Applications* shows how your team can easily design, test, maintain and extend sophisticated SPAs using JavaScript end to end without getting locked into a framework. Along the way you'll develop advanced HTML5, CSS3 and JavaScript skills and use JavaScript as the language of the web server and the database. This book assumes basic knowledge of web development. No experience with SPAs is required. Purchase of the print book includes a free eBook in PDF, Kindle and ePub formats from Manning Publications. What's Inside Design, build and test a full stack SPA. Best in class tools like jQuery, TaffyDB, Node.js and MongoDB. Real time web with web sockets and Socket.io. Touch controls for tablets and smartphones. Common SPA design mistakes. About the Authors The authors are architects and engineering managers. Michael Mikowski has worked on many commercial SPAs and a platform that processes over 100 billion requests per year. Josh Powell has built some of the most heavily trafficked sites on the web. Table of Contents PART 1 INTRODUCING SPAs Our first single page application. Reintroducing JavaScript. PART 2 SPA CLIENT Develop the Shell. Add feature modules. Build the Model. Finish the Model and Data modules. PART 3 THE SPA SERVER The web server. The server database. Ready for production.

Pro Single Page Application Development Gil Fink,Ido Flatow,SELA

Group,2014-05-10 One of the most important and exciting trends in web development in recent years is the move towards single page applications or SPAs Instead of clicking through hyperlinks and waiting for each page to load the user loads a site once and all the interactivity is handled fluidly by a rich JavaScript front end If you come from a background in ASP NET development you ll be used to handling most interactions on the server side Pro Single Page Application Development will guide you through your transition to this powerful new application type The book starts in Part I by laying the groundwork for SPA development You ll master some JavaScript techniques that will come in useful later on and get to know the building blocks of a single page application including modules routing and MV frameworks In Part II you ll build the client for your application This is where the magic happens as the authors take you through the process step by step Backbone js is the ideal library for demonstrating SPA development in practice but you can apply the same principles with other frameworks in your future applications Part III takes you through the process of building the server side of your application using ASP NET Web API and hooking up the two parts of your application to create a working whole SPA development also comes with its own particular challenges including tracking history user interface performance and how to handle search engine

optimization In the final chapters the authors guide you through some of these issues and advanced techniques and finish by showing you how to deploy your application As SPAs become the de facto standard of web application development the in depth Pro Single Page Application Development will be your one stop shop for creating fluid modern applications on the web
