Tutorials on Emerging Methodologies and Applications in Operations Research Harvey J. Greenberg, 2006-06-16
This volume reflects the theme of the INFORMS 2004 Meeting in Denver Back to OR Roots Emerging as a quantitative approach to problem solving in World War II our founders were physicists mathematicians and engineers who quickly found peace time uses It is fair to say that Operations Research OR was born in the same incubator as computer science and it has spawned many new disciplines such as systems engineering health care management and transportation science Although people from many disciplines routinely use OR methods many scientific researchers engineers and others do not understand basic OR tools and how they can help them Disciplines ranging from finance to bioengineering are the beneficiaries of what we do we take an interdisciplinary approach to problem solving Our strengths are modeling analysis and algorithm design We provide a quantitative foundation for a broad spectrum of problems from economics to medicine from environmental control to sports from e commerce to computational ometry We are both producers and consumers because the mainstream of OR is in the interfaces As part of this effort to recognize and extend OR roots in future problem solving we organized a set of tutorials designed for people who heard of the topic and want to decide whether to learn it The 90 minutes was spent addressing the questions What is this about in a nutshell Why is it important Where can I learn more In total we had 14 tutorials and eight of them are published here

Advances in Optimization and Approximation Ding-Zhu Du, Jie Sun, 2013-12-01 This book is a collection of research papers in optimization and approximation dedicated to Professor Minyi Yue of the Institute of Applied Mathematics Beijing China The papers provide a broad spectrum of research on optimization problems including scheduling location assignment linear and nonlinear programming problems as well as problems in molecular biology The emphasis of the book is on algorithmic aspects of research work in optimization Special attention is paid to approximation algorithms including heuristics for combinatorial approximation problems approximation algorithms for global optimization problems and applications of approximations in real problems The work provides the state of the art for researchers in mathematical programming operations research theoretical computer science and applied mathematics

Modern Numerical Nonlinear Optimization Neculai Andrei, 2022-10-18 This book includes a thorough theoretical and computational analysis of unconstrained and constrained optimization algorithms and combines and integrates the most recent techniques and advanced computational linear algebra methods Nonlinear optimization methods and techniques have reached their maturity and an abundance of optimization algorithms are available for which both the convergence properties and the numerical performances are known This clear friendly and rigorous exposition discusses the theory behind the nonlinear optimization algorithms for understanding their properties and their convergence enabling the reader to prove the convergence of his/her own algorithms It covers cases and computational performances of the most known modern nonlinear optimization algorithms that solve collections of unconstrained and constrained optimization test problems with different

structures complexities as well as those with large scale real applications The book is addressed to all those interested in developing and using new advanced techniques for solving large scale unconstrained or constrained complex optimization problems Mathematical programming researchers theoreticians and practitioners in operations research practitioners in engineering and industry researchers as well as graduate students in mathematics Ph D and master in mathematical programming will find plenty of recent information and practical approaches for solving real large scale optimization problems and applications

Modeling and Optimization of Interdependent Energy Infrastructures Wei Wei,Jianhui Wang,2019-10-22 This book opens up new ways to develop mathematical models and optimization methods for interdependent energy infrastructures ranging from the electricity network natural gas network district heating network and electrified transportation network The authors provide methods to help analyze design and operate the integrated energy system more efficiently and reliably and constitute a foundational basis for decision support tools for the next generation energy network Chapters present new operation models of the coupled energy infrastructure and the application of new methodologies including convex optimization robust optimization and equilibrium constrained optimization Four appendices provide students and researchers with helpful tutorials on advanced optimization methods Basics of Linear and Conic Programs Formulation Tricks in Integer Programming Basics of Robust Optimization Equilibrium Problems This book provides theoretical foundation and technical applications for energy system integration and the the interdisciplinary research presented will be useful to readers in many fields including electrical engineering civil engineering and industrial engineering

Applied Parallel Computing. Industrial Computation and Optimization Jerzy Waśniewski,1996 This book constitutes the refereed proceedings of the Third International Workshop on Applied Parallel Computing PARA 96 held in Lyngby Denmark in August 1996 The volume presents revised full versions of 45 carefully selected contributed papers together with 31 invited presentations The papers address all current aspects of applied parallel computing relevant for industrial computations The invited papers review the most important numerical algorithms and scientific applications on several types of parallel machines

Continuous Nonlinear Optimization for Engineering Applications in GAMS Technology Neculai Andrei,2017-12-04 This book presents the theoretical details and computational performances of algorithms used for solving continuous nonlinear optimization applications imbedded in GAMS Aimed toward scientists and graduate students who utilize optimization methods to model and solve problems in mathematical programming operations research business engineering and industry this book enables readers with a background in nonlinear optimization and linear algebra to use GAMS technology to understand and utilize its important capabilities to optimize algorithms for modeling and solving complex large scale continuous nonlinear optimization problems or applications Beginning with an overview of constrained nonlinear optimization methods this book moves on to illustrate key aspects of mathematical modeling through modeling technologies based on algebraically oriented modeling languages Next the main feature of GAMS an algebraically oriented

language that allows for high level algebraic representation of mathematical optimization models is introduced to model and solve continuous nonlinear optimization applications More than 15 real nonlinear optimization applications in algebraic and GAMS representation are presented which are used to illustrate the performances of the algorithms described in this book Theoretical and computational results methods and techniques effective for solving nonlinear optimization problems are detailed through the algorithms MINOS KNITRO CONOPT SNOPT and IPOPT which work in GAMS technology

Neural Nets Maria Marinaro, Roberto Tagliaferri, 2002-09-27 This book constitutes the thoroughly refereed post proceedings of the 13th Italian Workshop on Neural Nets WIRN VIETRI 2002 held in Vietri sul Mare Italy in May June 2002 The 21 revised full papers presented together with three invited papers were carefully reviewed and revised during two rounds of selection and improvement The papers are organized in topical sections on architectures and algorithms image and signal processing applications and learning in neural networks

Astrodynamics, Space Missions, and Chaos Edward Belbruno, David Folta, Pini Gurfil, 2004 The subject of astrodynamics is of particular interest at this critical juncture for space projects in the wake of the Columbia disaster This volume based on a conference sponsored by NASA and Princeton University comprises papers on the applications of chaos and dynamical systems including considerations of asteroid pairs near Earth objects and asteroidal dust formation flying optimization guidance and control systems mission design orbit dynamics and propulsion including material on NASA s major initiative Project Prometheus The volume is also of value to mathematicians for its discussion of chaos related issues to astronomers astrodynamicists and planetary geologists for its blueprint for the methodology of future space exploration and to engineers for its discussion of innovations in space propulsion systems It is also a must read for commercial economic and military policymakers

The Traveling Salesman Problem David L. Applegate, 2006 Presents the findings on one of the most intensely investigated subjects in computational mathematics the travelling salesman problem This book describes the method and computer code used to solve a range of large scale problems and demonstrates the interplay of applied mathematics with increasingly powerful computing platforms

Parallel Computing in Optimization A. Migdalas, Panos M. Pardalos, Sverre Storøy, 2013-12-01 During the last three decades breakthroughs in computer technology have made a tremendous impact on optimization In particular parallel computing has made it possible to solve larger and computationally more difficult problems This volume contains mainly lecture notes from a Nordic Summer School held at the Linköping Institute of Technology Sweden in August 1995 In order to make the book more complete a few authors were invited to contribute chapters that were not part of the course on this first occasion The purpose of this Nordic course in advanced studies was three fold One goal was to introduce the students to the new achievements in a new and very active field bring them close to world leading researchers and strengthen their competence in an area with internationally explosive rate of growth A second goal was to strengthen the bonds between students from different Nordic countries and to encourage collaboration and joint research ventures over the borders In this

respect the course built further on the achievements of the Nordic Network in Mathematical Programming which has been running during the last three years with the support of the Nordic Council for Advanced Studies NorFA. The final goal was to produce literature on the particular subject which would be available to both the participating students and to the students of the next generation.
