**The Practice and Science of Drawing by Harold Speed** Harold Speed, 2017-12-22 Permit me in the first place to anticipate the disappointment of any student who opens this book with the idea of finding wrinkles on how to draw faces trees clouds or what not short cuts to excellence in drawing or any of the tricks so popular with the drawing masters of our grandmothers and still dearly loved by a large number of people No good can come of such methods for there are no short cuts to excellence But help of a very practical kind it is the aim of the following pages to give although it may be necessary to make a greater call upon the intelligence of the student than these Victorian methods attempted It was not until some time after having passed through the course of training in two of our chief schools of art that the author got any idea of what drawing really meant What was taught was the faithful copying of a series of objects beginning with the simplest forms such as cubes cones cylinders but it was not enough And when with an eye trained to the closest mechanical accuracy the author visited the galleries of the Continent and studied the drawings of the old masters it soon became apparent that either his or their ideas of drawing were all wrong Very few drawings could be found sufficiently like the model to obtain the prize at either of the great schools he had attended Luckily there was just enough modesty left for him to realise that possibly they were in some mysterious way right and his own training in some way lacking And so he set to work to try and climb the long uphill road that separates mechanically accurate drawing from artistically accurate drawing Now this journey should have been commenced much earlier and perhaps it was due to his own stupidity that it was not but it was with a vague idea of saving some students from such wrong headedness and possibly straightening out some of the path that he accepted the invitation to write this book In writing upon any matter of experience such as art the possibilities of misunderstanding are enormous and one shudders to think of the things that may be put down to one's credit owing to such misunderstandings It is like writing about the taste of sugar you are only likely to be understood by those who have already experienced the flavour by those who have not the wildest interpretation will be put upon your words The written word is necessarily confined to the things of the understanding because only the understanding has written language whereas art deals with ideas of a different mental texture which words can only vaguely suggest However there are

a large number of people who although they cannot viibe said to have experienced in a full sense any works of art have undoubtedly the impelling desire which a little direction may lead on to a fuller appreciation And it is to such that books on art are useful So that although this book is primarily addressed to working students it is hoped that it may be of interest to that increasing number of people who tired with the rush and struggle of modern existence seek refreshment in artistic things To many such in this country modern art is still a closed book its point of view is so different from that of the art they have been brought up with that they refuse to have anything to do with it Whereas if they only took the trouble to find out something of the point of view of the modern artist they would discover new beauties they little suspected **The Practice**
