Statistical Methods In Environmental Epidemiology:

Statistical Methods in Environmental Epidemiology Duncan C. Thomas, 2023 A systematic treatment of the statistical challenges that arise in environmental health studies and the use of epidemiologic data in formulating public policy at a level suitable for graduate students and epidemiologic researchers

Statistical Methods for Environmental Epidemiology with R Roger D. Peng, Francesca Dominici, 2008-07-25 As an area of statistical application environmental epidemiology and more specifically the estimation of health risk associated with the exposure to environmental agents has led to the development of several statistical methods and software that can then be applied to other scientific areas The statistical analyses aimed at addressing questions in environmental epidemiology have the following characteristics Often the signal to noise ratio in the data is low and the targets of inference are inherently small risks These constraints typically lead to the development and use of more sophisticated and potentially less transparent statistical models and the integration of large high dimensional databases New technologies and the widespread availability of powerful computing are also adding to the complexities of scientific investigation by allowing researchers to fit large numbers of models and search over many sets of variables As the number of variables measured increases so do the degrees of freedom for inferring the association between a risk factor and an outcome of interest We have written this book in part to describe our experiences developing and applying statistical methods for the estimation of air pollution health effects Our experience has convinced us that the application of modern statistical methodology in a reproducible manner can bring to bear substantial benefits to policy makers and scientists in this area We believe that the methods described in this book are applicable to other areas of environmental epidemiology particularly those areas involving spatial temporal exposures

Statistical Methods in Environmental Epidemiology Duncan C. Thomas, 2009-02-26 Environmental epidemiology is the study of the environmental causes of disease in populations and how these risks vary in relation to intensity and duration of exposure and other factors like genetic susceptibility As such it is the basic science upon which governmental safety standards and compensation policies for environmental and occupational exposure are based Profusely illustrated with examples from the epidemiologic literature on ionizing radiation and air pollution this text provides a systematic treatment of the statistical challenges that arise in environmental health studies and the use of epidemiologic data in formulating public policy at a level suitable for graduate students and epidemiologic researchers After a general overview of study design and statistical methods for epidemiology generally the book goes on to address the problems that are unique to environmental health studies special purpose designs like two phase case control studies and counter matching statistical methods for modeling exposure time response relationships longitudinal and time series studies spatial and ecologic methods exposure measurement error interactions and mechanistic models It also discusses studies aimed at evaluating the public health benefits of interventions to improve the environment the use of epidemiologic data to establish environmental safety standards and compensation policy and concludes with emerging

problems in reproductive epidemiology natural and man made disasters like global warming and the global burden of environmentally caused disease No other book provides such a broad perspective on the methodological challenges in this field at a level accessible to both epidemiologists and statisticians

Statistical Methods for Environmental Mixtures
 Andrea Bellavia, 2025-01-27 This book provides a comprehensive introduction to statistical approaches for the assessment of complex environmental exposures such as pollutants and chemical mixtures within the exposome framework Environmental mixtures are defined as groups of 3 or more chemical pollutants simultaneously present in nature consumer products or in the human body Assessing the health effects of environmental mixtures poses several methodological challenges due to the high levels of correlation that are often present between environmental chemicals and by the need of incorporating flexible non additive and non linear effects that can capture and describe the complex mechanisms by which environmental exposure contribute to diseases Several statistical approaches are proposed and discussed including the application of regression based approaches e g penalized regression such as LASSO and elastic net or Bayesian variable selection for environmental exposures and novel methods e g weighted quantile sum regression or Bayesian Kernel Machine Regression that account for specific complexities of environmental exposures More recent efforts included are the application of machine learning approaches e g gradient boosting for environmental data Statistical Methods for Environmental Mixtures describes the statistical challenges that commonly arise when dealing with environmental exposures and provides an introduction to different statistical approaches for such data Over the last decade substantial efforts have been made to transition the statistical framework for environmental exposures in epidemiologic studies from a single chemical pollutant to a multi chemicals pollutants approach This book provides a comprehensive introduction to this modern multi chemicals pollutants framework Emphasis is given to interpretability discussing issues with causal interpretation and translation of scientific finding when applying the discussed statistical approaches for complex environmental exposures The target audience includes researchers in environmental epidemiology and applied statisticians working in the field As such while rigorously presenting the statistical methodologies the book keeps an applied focus discussing those settings where each method is appropriate for use and for which question it can be applied providing examples of accurate presentation and interpretation from the literature including a basic introduction to R packages and tutorials as well as discussing assumptions and practical challenges when applying these techniques on real data

Spatial Statistical Methods in Environmental Epidemiology
 P. J. Diggle, P. Elliott, Economic and Social Research Council, 1998 *Spatio-Temporal Methods in Environmental Epidemiology with R* Gavin Shaddick, James V. Zidek, Alexandra M. Schmidt, 2023-12-12 Spatio Temporal Methods in Environmental Epidemiology with R like its First Edition explores the interface between environmental epidemiology and spatio temporal modeling It links recent developments in spatio temporal theory with epidemiological applications Drawing on real life problems it shows how recent advances in methodology can assess the health risks associated with environmental

hazards The book's clear guidelines enable the implementation of the methodology and estimation of risks in practice New additions to the Second Edition include a thorough exploration of the underlying concepts behind knowledge discovery through data a new chapter on extracting information from data using R and the tidyverse additional material on methods for Bayesian computation including the use of NIMBLE and Stan new methods for performing spatio temporal analysis and an updated chapter containing further topics Throughout the book there are new examples and the presentation of R code for examples has been extended Along with these additions the book now has a GitHub site <https://spacetime-envir.github.io/stepi2/> that contains data code and further worked examples Features Explores the interface between environmental epidemiology and spatio temporal modeling Incorporates examples that show how spatio temporal methodology can inform societal concerns about the effects of environmental hazards on health Uses a Bayesian foundation on which to build an integrated approach to spatio temporal modeling and environmental epidemiology Discusses data analysis and topics such as data visualization mapping wrangling and analysis Shows how to design networks for monitoring hazardous environmental processes and the ill effects of preferential sampling Through the listing and application of code shows the power of R tidyverse NIMBLE and Stan and other modern tools in performing complex data analysis and modeling Representing a continuing important direction in environmental epidemiology this book in full color throughout underscores the increasing need to consider dependencies in both space and time when modeling epidemiological data Readers will learn how to identify and model patterns in spatio temporal data and how to exploit dependencies over space and time to reduce bias and inefficiency when estimating risks to health

Statistical Methods in Spatial Epidemiology Andrew B.

Lawson, 2013-07-08 Spatial epidemiology is the description and analysis of the geographical distribution of disease It is more important now than ever with modern threats such as bio terrorism making such analysis even more complex This second edition of Statistical Methods in Spatial Epidemiology is updated and expanded to offer a complete coverage of the analysis and application of spatial statistical methods The book is divided into two main sections Part 1 introduces basic definitions and terminology along with map construction and some basic models This is expanded upon in Part II by applying this knowledge to the fundamental problems within spatial epidemiology such as disease mapping ecological analysis disease clustering bio terrorism space time analysis surveillance and infectious disease modelling Provides a comprehensive overview of the main statistical methods used in spatial epidemiology Updated to include a new emphasis on bio terrorism and disease surveillance Emphasizes the importance of space time modelling and outlines the practical application of the method Discusses the wide range of software available for analyzing spatial data including WinBUGS SaTScan and R and features an accompanying website hosting related software Contains numerous data sets each representing a different approach to the analysis and provides an insight into various modelling techniques This text is primarily aimed at medical statisticians researchers and practitioners from public health and epidemiology It is also suitable for postgraduate students
