Stochastic and Statistical Methods in Hydrology and Environmental Engineering Keith W. Hipel,2012-12-06 Objectives The current global environmental crisis has reinforced the need for developing flexible mathematical models to obtain a better understanding of environmental problems so that effective remedial action can be taken Because natural phenomena occurring in hydrology and environmental engineering usually behave in random and probabilistic fashions stochastic and statistical models have major roles to play in the protection and restoration of our natural environment Consequently the main objective of this edited volume is to present some of the most up to date and promising approaches to stochastic and statistical modelling especially with respect to groundwater and surface water

applications Contents As shown in the Table of Contents the book is subdivided into the following main parts GENERAL ISSUES PART I PART II GROUNDWATER PART III SURFACE WATER PART IV STOCHASTIC OPTIMIZATION PART V MOMENT ANALYSIS PART VI OTHER TOPICS Part I raises some thought provoking issues about probabilistic modelling of hydro logical and environmental systems The first two papers in Part I are in fact keynote papers delivered at an international environmetrics conference held at the University of Waterloo in June 1993 in honour of Professor T E Unny In his keynote pa per Dr S J Burges of the University of Washington places into perspective the historical and future roles of stochastic modelling in hydrology and environmental engineering Additionally Dr Burges stresses the need for developing a sound scien tific basis for the field of hydrology Professor P E **Environmental Engineering and Safety** Sangeeta Raut,Sudip Kumar Sen,2017-04-01 Future scientists engineers public health workers face challenges which were predicted but certainly not expected to emerge this soon and to the magnitude presently occurring The problems and projected solutions in this book cover a broad spectrum of issues including industrial and domestic solid wastes air pollution and associated global warming noise pollution and safety Many engineering elements go into developing solutions to these problems including the need for additional detailed mapping and surveying developing improved waste water treatment including the development of more eco friendly process and importance on conservation Issues such as environmental assessments now play a most important role in practically all proposed developments Old landfills are being mined for fuel new landfills are designed to prevent waste materials from migrating to groundwater and new approaches to waste incineration focus on energy recovery and conversion of waste materials into usable materials This text should help engineers and scientists meet the environmental challenges
