Advances in monitoring the economy Rene Segers, 2009 Monitoring involves the collection analysis and evaluation of information over time For many professionals monitoring is a central aspect of their work For example policy makers closely watch the effects of their current policies to set the right course for reform Likewise physicians monitor the well being of their patients to adjust their treatments when necessary In business financial investors monitor stock prices and interest rates to optimally time their investments while marketing managers watch their customers needs and wants to frame their marketing efforts The above examples illustrate that monitoring is crucial in many disciplines to make the right decisions at the right moment For this reason there has always been a need for improved monitoring methods With the advent of increasingly powerful computers and advanced analytical techniques monitoring systems can nowadays process large amounts of information and have become fully automated where desired A large body of monitoring methods originate from academics Especially during the past four decades many insights from various fields such as economics statistics psychometrics and

econometrics found their way into everyday monitoring practice With the overwhelming availability of information in some cases but also the intrinsic lack of information in other cases the area is continuously faced with new and highly relevant research challenges The aim of this thesis is to contribute to the development of new monitoring methods by offering potential solutions to some of these challenges The challenges studied in this thesis arise from all three aspects of monitoring that is from the collection the analysis as well as from the evaluation of information
