Methodology - Enabling Requirements-driven Design Spaces Victor Gane,2011 During the conceptual design process the building shape orientation materials and other major properties are established all of which have a substantial impact on multi aspect performance In this process multidisciplinary teams define project objectives create various alternatives and try to understand their impacts and value With non parametric Computer Aided Design CAD methods designers produce and analyze as few as three alternatives whereas with parametric CAD they can generate thousands However with current parametric methods CAD experts lack a comprehensive method to build and analyze multi objective parametric models Therefore the resulting models do not effectively encapsulate multi objective value measures This research introduces the Design Scenarios Methodology DS which builds on research from Systems Engineering Process Modeling and Parametric Modeling With DS Enablers use Methods to create Elements using five interconnected models to define 1 project stakeholders and their objectives 2 designer logic used to address objectives 3 the connection between designer logic and computable models to generate alternatives 4 the predicted impact and 5 value of the generated alternatives I implemented DS as a web based software prototype and tested it on an industry project The results provide evidence that the DS method provides CAD experts with well defined logic and parameters for addressing objectives and the process enables creating parametric alternatives with clear multi objective values that potentially provide clients with better building designs This thesis lays the foundation for future research on automating the design alternative generation and analyses processes by leveraging such well established methods as Multi Disciplinary Optimization *Tall Buildings: From Engineering To Sustainability* Y K Cheung,Kwong Wing Chau,2005-12-06 A collection of papers presented at the Sixth International Conference on Tall Buildings ICTB this volume clearly explains the engineering and socio economic aspects of tall buildings in specific areas of sustainability The papers focus on Asian cities where tall buildings have become a major feature of the built environment A multi disciplinary book it also deals with the increasing complexity of inter related problems that require knowledge integration from different disciplines With interesting contributions from distinguished practitioners academics and policy makers the book addresses the development and application of knowledge in solving problems related to tall buildings *Rethinking Technology* William W.
