

12 Camshaft Fitting

Apply a thin film of engine oil on the cam bearings and journals. Install a long bolt or this Goodson "handle" to help support the cam. Begin installing the cam in the block, rotating it as you go. If the bearings have been installed properly, the cam should turn freely as it enters each successive bearing. If the cam fits properly, proceed to Step 13. If the cam binds up, remove it and look for shiny high spots on

the bearings; they can sometimes be removed by careful scraping with a bearing knife. If you don't see distinct high spots, the cam may be bent; have your machine shop check it in a lathe or V-block fixture. If the cam is not bent, the bearings in the block may be undersize or out of alignment.

13 Install Keys and Lower Sprocket

If the cam fits properly, remove it and oil the cam journals and lobes with assembly lube, then reinstall it in the block. If the keys are not installed in the crank, see Step 7, on page 84. With the

keys installed, lightly lubricate the crank nose, and then install the sprocket with the large interior chamfer facing toward the block. Some lower sprockets have multiple keyways (often labeled with a circle, square, and a triangle or other similar marks). Align the sprocket on the ZERO keyway mark (usually labeled with a 0). Drive the sprocket on with a crank socket or a brass drift using light hammer blows.

15 Check Cam Drive Clearance

Some wide timing chains may scrape against the block or the chain cover. Check block clearance: Press the upper sprocket against the block face and rotate the crank. Look for chain contact of less than .030-inch clearance. Mark the tight points and remove the upper sprocket (not the cam). Stick strips of duct tape over the cam bore and around the main journal to keep grinding debris away from the bearings. Draping rags over the block and crank also helps. Grind only enough to provide the necessary clearance. Wipe everything clean and recheck clearance. Check cover clearance: When sufficient block clearance is obtained, install the chain cover (without a gasket) and rotate the assembly. If the chain contacts the cover, you should locate a deeper replacement cover, such as the aluminum cover (offered by a variety of companies such as Milodon) or install a narrower timing chain set. **IMPORTANT:** If you have to grind the block, we recommend that you disassemble and thoroughly re-clean everything. Then reassemble the engine to the same point.

14 Install Upper Sprocket

Rotate the crank so the keyway points to approximately 2 o'clock, and then rotate the cam so that the dowel pinpoints to approximately the 3 o'clock position. Install the upper sprocket and timing chain. Make sure the timing marks line up as shown. **IMPORTANT:** With the keyway on the crankshaft pointing to the 2 o'clock position and the camshaft dowel pin close to the 3 o'clock position, the timing marks on the upper sprockets should line up. If they don't, the sprockets are aligned to the wrong marks.
