artificielle et Big Data Fernando Iafrate, 2018-04-01 La série Systèmes d'information avancés approfondit les nouvelles formes du SI qui est devenu avec le numérique le véritable système nerveux de toute organisation. Les Big Data s'affirment tous les jours un peu plus comme le nouvel or noir. Les grands acteurs du numérique tels que Google, Amazon, Facebook et Apple, mais aussi les grandes entreprises, en ont fait un axe de développement important. Leur exploitation reste encore une affaire d'experts, mais l'ère des algorithmes arrive, grands pas plus précis que celle de l'intelligence artificielle, qui est sans doute la réponse la plus prometteuse à l'exploitation massive, auto-apprenante et autonome de ces Big Data. Cet ouvrage propose de parcourir la face cachée de cette nouvelle ère et permet de comprendre comment, au travers d'exemples concrets, cette intelligence différente de la nôtre va sans doute changer notre perception du monde, nos relations. Reste à savoir jusqu'à quel point nous lui délèguons nos décisions. *Jeune Afrique L'intelligent*, 2004
