Modern Fluorescence Spectroscopy Earl Wehry, 2013-06-29 The principles of fluorescence spectroscopy are by now well established and after a rather lengthy gestation period the technique is now routinely applied to a broad spectrum of problems ranging from mechanistic photo chemistry to chemical analyses in biomedical and environmental systems of structure and function in biological macromolecules Phosphor to probes escence spectrometry and chemiluminescence are also well known tech niques they are somewhat less well established than fluorescence at least in analytical chemistry but they too are receiving greatly increased appli cation to both laboratory and real problems This is not to imply that luminescence spectroscopy viewed in its broadest sense is a static field In fact recent advances in instrumentation make it feasible to apply fluorescence to problem areas in which its use five years ago would have been unthinkable Advances in hardware generate advances in application and very significant progress is being recorded in the application of fluorescence and its close relatives phosphorescence and chemiluminescence in the biochemical biomedical and environmental spheres
