Comar, 2013 There is a gap between the extensive mathematics background that is beneficial to biologists and the minimal mathematics background biology students acquire in their courses The result is an undergraduate education in biology with very little quantitative content New mathematics courses must be devised with the needs of biology students in mind In this volume authors from a variety of institutions address some of the problems involved in reforming mathematics curricula for biology students The problems are sorted into three themes Models Processes and Directions It is difficult for mathematicians to generate curriculum ideas for the training of biologists so a number of the curriculum models that have been introduced at various institutions comprise the Models section Processes deals with taking that great course and making sure it is institutionalized in both the biology department as a requirement and in the mathematics department as a course that will live on even if the creator of the course is no longer on the faculty Directions looks to the future with each paper laying out a case for pedagogical developments that the authors would like to see Study Guide for Stewart's Single Variable Calculus: Early Transcendentals, 7th James Stewart, 2011-04-26 For each section of Stewart's Single Variable text the Study Guide provides a brief introduction a short list of concepts to master as well as summary and focus questions with explained answers It also contains Technology Plus questions as well as multiple choice On Your Own exam style questions **Undergraduate Introduction To Financial Mathematics, An (Fourth Edition)** J Robert Buchanan, 2022-10-25 Anyone with an interest in learning about the mathematical modeling of prices of financial derivatives such as bonds futures and options can start with this book whereby the only mathematical prerequisite is multivariable calculus The necessary theory of interest statistical stochastic and differential equations are developed in their respective chapters with the goal of making this introductory text as self contained as possible In this edition the chapters on hedging portfolios and extensions of the Black Scholes model have been expanded The chapter on optimizing portfolios has been completely re written to focus on the development of the Capital Asset Pricing Model The binomial model due to Cox Ross Rubinstein has been enlarged into a standalone chapter
