

The model for the temperature, T , in degrees Fahrenheit, $^{\circ}\text{F}$, of a glass of lemonade t hours after being placed in a room with a constant temperature of 70° , given the initial temperature of the lemonade was 40° , is $T = 70 - 30e^{-.5t}$. Determine the average temperature over the last 5 hours.

(average - mean value theorem)

$[0,5]$

$$\frac{1}{5-0} \int_0^5 (70 - 30e^{-.5t}) dt$$

$$\frac{1}{5} \left(\int_0^5 70 dt - \int_0^5 30e^{-.5t} dt \right)$$

$$\frac{1}{5} \left(\int 70 dt - \int 30e^u \frac{du}{-.5} \right)$$

$$u = -.5t$$

$$du = -.5 dt$$

$$\frac{du}{-.5} = dt$$

$$\frac{1}{5} \left(\int 70 dt - \int -60e^u du \right)$$

$$\frac{1}{5} (70t + 60e^{-.5t}) \Big|_0^5$$

$$\frac{1}{5} (70(5) + 60e^{-.5(5)} - (70(0) + 60e^{-.5(0)}))$$

Marsden and A. Weinstein** Frederick H. Soon,2012-12-06 This Student Guide is exceptional maybe even unique among such guides in that its author Fred Soon was actually a student user of the textbook during one of the years we were writing and debugging the book He was one of the best students that year by the way Because of his background Fred has taken in the Guide the point of view of an experienced student tutor helping you to learn calculus ile we do not always think Fred s jokes are as funny as he does we appreciate his enthusiasm and his desire to enter into communication with his readers since we nearly always agree with the mathe matical judgements he has made in explaining the material we believe that this Guide can serve you as a valuable supplement to our text To get maximum benefit from this Guide you should begin by spending a few moments to acquaint yourself with its structure Once you get started in the course take advantage of the many opportunities which the text and Student Guide together provide for learning calculus in the only way that any mathe matical subject can truly be mastered through attempting to solve problems on your own As you read the text try doing each example and exercise your self before reading the solution do the same with the quiz problems provided by Fred A Course of Analysis E. G. Phillips,1939 Originally published in 1962 this book covers all of the cornerstones of complex mathematical analyses Chapters include Bounds and limits of sequences Integral calculus and Functions of more than one variable Multiple examples are included at the end of every chapter to support and illustrate the fundamental concepts **A Course of Analysis , Mathematical Thinking and Problem Solving** Alan H. Schoenfeld,Alan H. Sloane,2016-05-06 In the early 1980s there was virtually no serious communication among the various groups that contribute to mathematics education mathematicians mathematics educators classroom teachers and cognitive scientists Members of these groups came from different traditions had different perspectives and rarely gathered in the same place to discuss issues of common interest Part of the problem was that there was no common ground for the discussions given the disparate traditions and perspectives As one way of addressing this problem the Sloan Foundation funded two conferences in the mid 1980s bringing together members of the different communities in a ground clearing effort designed to establish a base for communication In those conferences interdisciplinary teams reviewed major topic areas and put together distillations of what was known about them A more recent conference upon which this volume is based offered a forum in which various people involved in education reform would present their work and members of the broad communities gathered would comment on it The focus was primarily on college mathematics informed by developments in K 12 mathematics The main issues of the conference were mathematical thinking and problem solving *Encyclopedic Dictionary of Mathematics* Nihon Sūgakkai,1993 V 1 A n v 2 O Z Apendices and indexes **The Encyclopaedia of Pure Mathematics** ,1847 **TExES Mathematics 7-12 (235) Book**
