Paleoanthropology of the Balkans and Anatolia Katerina Harvati,Mirjana Roksandic,2017-01-18 This edited volume systematically reviews the evidence for early human presence in one of the most relevant geographic regions of Europe the Balkans and Anatolia an area that has been crucial in shaping the course of human evolution in Europe but whose paleoanthropological record is poorly known The primary aim of this book is to showcase new paleoanthropological human paleontological and paleolithic research conducted in the region The volume is organized into three sections The first one deals with the human fossil record from Greece the Central Balkans Croatia Romania Bulgaria and Turkey The second section presents the paleolithic record of the same countries In the third part the authors provide a synthesis of current paleoenvironmental evidence for the Balkans Chapters summarize and systematize the available human fossil evidence examine their context and place them within the framework of our understanding of human evolution in Europe and beyond as well as present new analyses of existing human fossils This book will be of interest to professionals upper undergraduate and graduate students in paleoanthropology human

paleontology and paleolithic archaeology and in a variety of related fields including human variation and adaptation paleontology and biogeography It will also be appropriate as a reference book for advanced undergraduate and graduate courses on human evolution and European paleoanthropology How the Brain Got Language Michael A. Arbib, 2012-04-11 Unlike any other species humans can learn and use language This book explains how the brain evolved to make language possible through what Michael Arbib calls the Mirror System Hypothesis Because of mirror neurons monkeys chimps and humans can learn by imitation but only complex imitation which humans exhibit is powerful enough to support the breakthrough to language This theory provides a path from the openness of manual gesture which we share with nonhuman primates through the complex imitation of manual skills pantomime protosign communication based on conventionalized manual gestures and finally to protospeech The theory explains why we humans are as capable of learning sign languages as we are of learning to speak This fascinating book shows how cultural evolution took over from biological evolution for the transition from protolanguage to fully fledged languages The author explains how the brain mechanisms that made the original emergence of languages possible perhaps 100 000 years ago are still operative today in the way children acquire language in the way that new sign languages have emerged in recent decades and in the historical processes of language change on a time scale from decades to centuries Though the subject is complex this book is highly readable providing all the necessary background in primatology neuroscience and linguistics to make the book accessible to a general audience
