The Classical Language Of Architecture:

The Classical Language of Architecture John Summerson, 1966-12-15 The author's purpose is to set out as simply and vividly as possible the exact grammatical workings of an architectural language. Classical architecture is a visual language and like any other language has its own grammatical rules. Classical buildings as widely spaced in time as a Roman temple and an Italian Renaissance palace and a Regency house all show an awareness of these rules even if they vary them, break them or poetically contradict them. Sir Christopher Wren described them as the Latin of architecture and the analogy is almost exact. There is the difference however that whereas the learning of Latin is a slow and difficult business the language of classical architecture is relatively simple. It is still to a great extent the mode of expression of our urban surroundings since classical architecture was the common language of the western world till comparatively recent times. Anybody to whom architecture makes a strong appeal has probably already discovered something of its grammar for himself. In this book the author's purpose is to set out as simply and vividly as possible the exact grammatical workings of this architectural language. He is less concerned with its development in Greece and Rome than with its expansion and use in the centuries since the Renaissance. He explains the vigorous discipline of the orders and the scope of rustication, the dramatic deviations of the Baroque and in the last chapter the relationship between the classical tradition and the modern architecture of today. The book is intended for anybody who cares for architecture but more specifically for students beginning a course in the history of architecture to whom a guide to the classical rules will be an essential companion.

The Classical Language of Architecture John Summerson, 1982 *The Classical Language of Architecture* John Summerson, 1977 **The Classical Language of Architecture** John Summerson, Alan Powers, 2023-09-07 Derived from the principles of Greek and Roman architecture in antiquity the classical style has long dominated the history of western architecture from the Renaissance to the present. Sir John Summerson's timeless text as relevant today as it was when first published distils the visual language of architecture into its core classical elements and illustrates that building throughout the ages expresses an awareness of the grammar of style and its rules even if they vary, break or poetically contradict them. From the original edifices of Greece and Rome to the recapitulations and innovations of the Renaissance, the explosive rhetoric of the Baroque to the grave statements of Neo-classicism and finally the exuberant eclecticism of the Victorians and Edwardians to the stripped Neo-classicism of some of the moderns Summerson explains how every period has employed classical language to make their statement. With a new introduction by academic and architectural historian Alan Powers this introduction continues to be one of the defining texts on the subject and is essential reading for all students of architecture.
