Sustainability And Cities Overcoming Automobile Dependence:

Sustainability and Cities Peter Newman, Jeffrey Kenworthy, 1999-02 Our dependence on cars is a huge problem but the authors argue that it can be overcome and a new form of urban organisation developed They examine the trends which shape global cities and establishes transport priorities within this framework *The End of Automobile Dependence* Peter Newman, Jeffrey Kenworthy, 2015-08-11 Cities will continue to accommodate the automobile but when cities are built around them the quality of human and natural life declines Current trends show great promise for future urban mobility systems that enable freedom and connection but not dependence We are experiencing the phenomenon of peak car use in many global cities at the same time that urban rail is thriving central cities are revitalizing and suburban sprawl is reversing Walking and cycling are growing in many cities along with ubiquitous bike sharing schemes which have contributed to new investment and vitality in central cities including Melbourne Seattle Chicago and New York We are thus in a new era that has come much faster than global transportation experts Peter Newman and Jeffrey Kenworthy had predicted the end of automobile dependence In *The End of Automobile Dependence* Newman and Kenworthy look at how we can accelerate a planning approach to designing urban environments that can function reliably and conveniently on alternative modes with a refined and more civilized automobile playing a very much reduced and manageable role in urban transportation The authors examine the rise and fall of automobile dependence using updated data on 44 global cities to better understand how to facilitate and guide cities to the most productive and sustainable outcomes This is the final volume in a trilogy by Newman and Kenworthy on automobile dependence *Cities and Automobile Dependence* in 1989 and *Sustainability and Cities Overcoming Automobile Dependence* in 1999 Like all good trilogies this one shows the rise of an empire in this case that of the automobile the peak of its power and the decline of that empire **Elgar Companion to Sustainable Cities** Daniel A. Mazmanian, Hilda Blanco, 2014-06-27 Against a backdrop of unprecedented levels of urbanization 21st century cities across the globe share concerns for the challenges they face This Companion provides a framework for understanding the city as a critical building block for a more sustainable future *Net Zero Cities with Sustainability* Peter Newman, 2025-09-10 This important book sheds light on the opportunities and complexities involved in the transition to net zero cities Drawing on the framework of the Paris Agreement and the United Nations Sustainable Development Goals Peter Newman outlines how cities can achieve net zero and sustainability agendas together as part of the global shift to a new economy **An Introduction to Sustainable Transportation** Preston L. Schiller, Eric Christian Bruun, Jeffrey R. Kenworthy, 2010 Transportation plays a substantial role in the modern world it provides tremendous benefits to society but it also imposes significant economic social and environmental costs Sustainable transport planning requires integrating environmental social and economic factors in order to develop optimal solutions to our many pressing issues especially carbon emissions and climate change This essential multi authored work reflects a new sustainable transportation planning paradigm It explores the concepts of sustainable

development and sustainable transportation describes practical techniques for comprehensive evaluation provides tools for multi modal transport planning and presents innovative mobility management solutions to transportation problems This text reflects a fundamental change in transportation decision making It focuses on accessibility rather than mobility emphasizes the need to expand the range of options and impacts considered in analysis and provides practical tools to allow planners policy makers and the general public to determine the best solution to the transportation problems facing a community Featuring extensive international examples and case studies textboxes graphics recommended reading and end of chapter questions the authors draw on considerable teaching and researching experience to present an essential ground breaking and authoritative text on sustainable transport Students of various disciplines planners policymakers and concerned citizens will find many of its provocative ideas and approaches of considerable value as they engage in the processes of understanding and changing transportation towards greater sustainability

Cities as Sustainable Ecosystems Peter Newman, Isabella Jennings, 2012-09-26 Modern city dwellers are largely detached from the environmental effects of their daily lives The sources of the water they drink the food they eat and the energy they consume are all but invisible often coming from other continents and their waste ends up in places beyond their city boundaries *Cities as Sustainable Ecosystems* shows how cities and their residents can begin to reintegrate into their bioregional environment and how cities themselves can be planned with nature s organizing principles in mind Taking cues from living systems for sustainability strategies Newman and Jennings reassess urban design by exploring flows of energy materials and information along with the interactions between human and non human parts of the system Drawing on examples from all corners of the world the authors explore natural patterns and processes that cities can emulate in order to move toward sustainability Some cities have adopted simple strategies such as harvesting rainwater greening roofs and producing renewable energy Others have created biodiversity parks for endangered species community gardens that support a connection to their foodshed and pedestrian friendly spaces that encourage walking and cycling A powerful model for urban redevelopment *Cities as Sustainable Ecosystems* describes aspects of urban ecosystems from the visioning process to achieving economic security to fostering a sense of place

The Sustainable City X C.A. Brebbia, W.F. Florez-Escobar, 2015-09-01 Containing the proceedings of the 10th International Conference on Urban Regeneration and Sustainability this book addresses the multidisciplinary aspects of urban planning a result of the increasing size of cities the amount of resources and services required and the complexity of modern society Most of earth s population now lives in cities and the process of urbanisation continues generating many problems deriving from the drift of the population towards them These problems can be resolved by cities becoming efficient habitats saving resources in a way that improves the quality and standard of living The process however faces a number of major challenges related to reducing pollution improving main transportation and infrastructure systems New urban solutions are required to optimise the use of space and energy resources leading to improvements in the

environment i.e reduction in air water and soil pollution as well as efficient ways to deal with waste generation These challenges contribute to the development of social and economic imbalances and require the development of new solutions Large cities are probably the most complex mechanisms to manage However despite such complexity they represent a fertile ground for architects engineers city planners social and political scientists and other professionals able to conceive new ideas and time them according to technological advances and human requirements The challenge of planning sustainable cities lies in considering their dynamics the exchange of energy and matter and the function and maintenance of ordered structures directly or indirectly supplied and maintained by natural systems Topics covered include Urban Strategies Planning Development and Management Urban Conservation and Regeneration The Community and the City Eco town Planning Landscape Planning and Design Environmental Management Sustainable Energy and the City Transportation Quality of Life Architectural Issues Cultural Heritage Issues Intelligent Environment and Emerging Technologies Planning for Risk Disaster and Emergency Response Safety and Security Waste Management Infrastructure and Society Urban Metabolism
