Mirás-Avalos,Philippe C. Baveye,2019-02-05 Global change is posing new threats to agroecosystems First climate modifications in the spatial and temporal distribution of rainfall increase the risks of severe droughts during the growing season of most crops Second conventional agriculture has led to the extension of mono crop fields that decreased biodiversity in agroecosystems it is possible that these fields will lack resilience when faced with changing climate In addition a new conscience has arisen and consumers tend to look for healthy products that sometimes do not match the objectives of conventional agriculture In this context sustainable and environmentally friendly agricultural practices that can cope with the new global change scenario are needed This eBook compiles state of the art research on the agroecosystems response to global change and on how to manage these new scenarios Despite the broad scope of the topic this Research Topic covers a wide range of subjects including biodiversity crop performance novel agricultural practices and soil properties

Handbook Of Climate Change And Agroecosystems: Impacts, Adaptation, And Mitigation Daniel Hillel,Cynthia Rosenzweig,2010-09-03 The portending process of climate change induced by the anthropogenic accumulations of greenhouse gases in the atmosphere is likely to generate effects that will cascade through the biosphere impacting all life on earth and bearing upon human endeavors Of special concern is the potential effect on agriculture and global food security Anticipating these effects demands that scientists widen their field of vision and cooperate across disciplines to encompass increasingly complex interactions Trans disciplinary cooperation should aim to generate effective responses to the evolving risks including actions to mitigate the emissions of greenhouse gases and to adapt to those climate changes that cannot be avoided This handbook presents an exposition of current research on the impacts adaptation and mitigation of climate

change in relation to agroecosystems It is offered as the first volume in what is intended to be an ongoing series dedicated to elucidating the interactions of climate change with a broad range of sectors and systems and to developing and spurring effective responses to this global challenge As the collective scientific and practical knowledge of the processes and responses involved continues to grow future volumes in the series will address important aspects of the topic periodically over the coming years
