Special Functions Encyclopedia Of Mathematics And Its Applications:

Special Functions George E. Andrews, Richard Askey, Ranjan Roy, 1999 An overview of special functions focusing on the hypergeometric functions and the associated hypergeometric series Special Functions in Fractional Calculus and Engineering Harendra Singh, H M Srivastava, R. K. Pandey, 2023-06-29 Special functions play a very important role in solving various families of ordinary and partial differential equations as well as their fractional order analogs which model real life situations Owing to the non local nature and memory effect fractional calculus is capable of modeling many situations which arise in engineering This book includes a collection of related topics associated with such equations and their relevance and significance in engineering Special Functions in Fractional Calculus and Engineering highlights the significance and applicability of special functions in solving fractional order differential equations with engineering applications This book focuses on the non local nature and memory effect of fractional calculus in modeling relevant to engineering science and covers a variety of important and useful methods using special functions for solving various types of fractional order models relevant to engineering science This book goes on to illustrate the applicability and usefulness of special functions by justifying their numerous and widespread occurrences in the solution of fractional order differential integral and integrodifferential equations This book holds a wide variety of interconnected fundamental and advanced topics with interdisciplinary applications that combine applied mathematics and engineering sciences which are useful to graduate students Ph D scholars researchers and educators interested in special functions fractional calculus mathematical modeling and engineering Convex Functions and Their Applications Constantin P. Niculescu, Lars-Erik Persson, 2018-06-08 Thorough introduction to an important area of mathematics Contains recent results Includes many exercises Proceedings of the 16th International Symposium on Orthogonal Polynomials, Special Functions and Applications (OPSFA-16) Howard S. Cohl, Luc Vinet, Sarah Post, Josée Savard, 2025-10-27 This proceedings provides a forum for mathematicians physicists and computational scientists to communicate and discuss recent research results in the areas of orthogonal polynomials and special functions This symposium is an event of the SIAM Activity Group on Orthogonal Polynomials and Special Functions The activity group promotes basic research in orthogonal polynomials and special functions as well as applications of this subject in other parts of mathematics and in science and industry It encourages and supports the exchange of information ideas and techniques between researchers in this field and other mathematicians and scientists This 16th edition of the proceedings reports advances generated by renowned international researchers and will include as well results obtained by younger scientists **Zeta and Q-Zeta Functions and Associated Series and Integrals** H. M. Srivastava, Junesang Choi, 2011-10-25 Zeta and q Zeta Functions and Associated Series and Integrals is a thoroughly revised enlarged and updated version of Series Associated with the Zeta and Related Functions Many of the chapters and sections of the book have been significantly modified or rewritten and a new chapter on the theory and applications of the basic or q extensions of various

special functions is included This book will be invaluable because it covers not only detailed and systematic presentations of the theory and applications of the various methods and techniques used in dealing with many different classes of series and integrals associated with the Zeta and related functions but stimulating historical accounts of a large number of problems and well classified tables of series and integrals Detailed and systematic presentations of the theory and applications of the various methods and techniques used in dealing with many different classes of series and integrals associated with the Zeta and related functions

Modern Trends in Constructive Function Theory E. B. Saff, Douglas Patten Hardin, Doron Shaul Lubinsky, Brian Z. Simanek, 2016-03-31 Contains the proceedings of the conference Constructive Functions 2014 held in May 2014 The papers in this volume include results on polynomial approximation rational approximation Log optimal configurations on the sphere random continued fractions ratio asymptotics for multiple orthogonal polynomials the bivariate trigonometric moment problem and random polynomials

An Introduction to q-analysis Warren P. Johnson, 2020-10-06 Starting from simple generalizations of factorials and binomial coefficients this book gives a friendly and accessible introduction to q q analysis a subject consisting primarily of identities between certain kinds of series and products Many applications of these identities to combinatorics and number theory are developed in detail There are numerous exercises to help students appreciate the beauty and power of the ideas and the history of the subject is kept consistently in view The book has few prerequisites beyond calculus It is well suited to a capstone course or for self study in combinatorics or classical analysis Ph D students and research mathematicians will also find it useful as a reference

A Gentle Invitation to the Fractional World Nicola Abatangelo, Serena Dipierro, Enrico Valdinoci, 2025-10-27 The book focuses on the basic theory of nonlocal and fractional operators and it is divided into two main parts covering respectively the basic theory of the singular integral fractional Laplacian operator which also includes a number of explicit examples of its evaluations and the regularity theory in L^p spaces by going through Bessel and Besov spaces A number of appendices then go over additional material in order to make the exposition as self contained as possible The book is suitable for a PhD course but can be also read by advanced undergraduates It contains didactic elements but it is also useful for researchers since it collects essential material in a concise and self constrained way

Advances in Mathematical Sciences Bahar Acu, Donatella Danielli, Marta Lewicka, Arati Pati, Saraswathy RV, Miranda Teboh-Ewungkem, 2020-07-16 This volume highlights the mathematical research presented at the 2019 Association for Women in Mathematics AWM Research Symposium held at Rice University April 6 7 2019 The symposium showcased research from women across the mathematical sciences working in academia government and industry as well as featured women across the career spectrum undergraduates graduate students postdocs and professionals The book is divided into eight parts opening with a plenary talk and followed by a combination of research paper contributions and survey papers in the different areas of mathematics represented at the symposium algebraic combinatorics and graph theory algebraic biology commutative algebra analysis probability and PDEs topology applied

mathematics mathematics education Vertex Operator Algebras, Number Theory and Related Topics Matthew Krauel, Michael Tuite, Gaywalee Yamskulna, 2020-07-13 This volume contains the proceedings of the International Conference on Vertex Operator Algebras Number Theory and Related Topics held from June 11 15 2018 at California State University Sacramento California The mathematics of vertex operator algebras vector valued modular forms and finite group theory continues to provide a rich and vibrant landscape in mathematics and physics The resurgence of moonshine related to the Mathieu group and other groups the increasing role of algebraic geometry and the development of irrational vertex operator algebras are just a few of the exciting and active areas at present The proceedings center around active research on vertex operator algebras and vector valued modular forms and offer original contributions to the areas of vertex algebras and number theory surveys on some of the most important topics relevant to these fields introductions to new fields related to these and open problems from some of the leaders in these areas
