SPEER MANUAL FOR RELOADING AMMUNITION

RIFLE
PISTOL
SHOTGUN

"World leader in products for handloading"

Step (B) Loosen the small locking ring (2) at the top of the die and unscrew the bullet seating stem (1) as far as possible. Place a commercial round in the shell holder (5) and move the cartridge into the die (3). Screw the bullet seating stem clockwise until the stem is snug against the bullet. Tighten the locking ring (4) and then remove the round of ammunition. You are now ready to seat the bullet in your previously charged case.

Remember in adjusting the bullet seating stem for average seating depth that you should use a round of ammunition having the same style bullet. For instance, if you are loading round-nose bullets it is best to have a fully loaded round which also is loaded with a round-nose bullet. Another style bullet could have a longer or shorter nose and consequently give you a different overall cartridge length. This basic adjustment procedure may be varied to meet individual conditions.

Con-way shows progressive steps as the bullet is seated in case.
