Space Pharmacology Springerbriefs In Space Development:

Space Pharmacology Virginia E. Wotring, 2012-03-18 Space Pharmacology is a review of the current knowledge regarding the use of pharmaceuticals during spaceflights. It is a comprehensive review of the literature addressing each area of pharmacokinetics and each major physiological system in turn. Every section begins with a topic overview and is followed by a discussion of published data from spaceflight and from ground experiments meant to model the spaceflight situation. Includes a discussion looking forward to the new medical challenges we are likely to face on longer duration exploration missions. This book is a snapshot of our current knowledge that also highlights areas of unknown. Space Radiation and Astronaut Safety Erik Seedhouse, 2018-04-10 This brief explores the biological effects of long term radiation on astronauts in deep space. As missions progress beyond Earth's orbit and away from the protection of its magnetic shielding, astronauts risk constant exposure to higher levels of galactic cosmic rays and solar particle events. The text concisely addresses the full spectrum of biomedical consequences from exposure to space radiation and goes on to present possible ways to mitigate such dangers and protect astronauts within the limitations of existing technologies. Smith, Natalie Baecker, 2015-07-27 This book provides an overview of microgravity induced changes in human metabolism, muscle, bone, and the cardiovascular system, and discusses in detail the nutrient uptake required during spaceflight to counteract these adaptive mechanisms and ensure an improved physical constitution upon returning to Earth. It addresses the needs of professors, researchers, and students working in the field of human physiology and nutrition. **Gravitational Biology II** Wolfgang Hanke, Florian P.M. Kohn, Maren Neef, Rüdiger Hampp, 2018-12-30 This volume of the series Space Life Sciences provides insights into the latest findings of gravity research and the effect of gravity on biological systems, specifically on a cellular and molecular level. It starts by explaining the underlying physics of gravity and presenting some novel ideas on the basic principles of gravity perception. It then goes on to discuss how, in response to gravity perception, secondary messengers such as calcium and hydrogen peroxide might control responses further downstream, like gene and protein expression and modulation. Further, it describes the consequences for animal and plant cells as well as for metabolism. Written by experts in the field, this book is a valuable resource for students and researchers in biochemistry, medicine, and biomedicine wanting to gain a solid understanding of membrane biology.
