Spatial Econometrics Methods And Models Studies In Operational Regional Science:

Spatial Econometrics: Methods and Models L. Anselin, 2013-03-09 Spatial econometrics deals with spatial dependence and spatial heterogeneity critical aspects of the data used by regional scientists. These characteristics may cause standard econometric techniques to become inappropriate. In this book I combine several recent research results to construct a comprehensive approach to the incorporation of spatial effects in econometrics. My primary focus is to demonstrate how these spatial effects can be considered as special cases of general frameworks in standard econometrics and to outline how they necessitate a separate set of methods and techniques encompassed within the field of spatial econometrics. My viewpoint differs from that taken in the discussion of spatial autocorrelation in spatial statistics e.g. most recently by Cliff and Ord 1981 and Upton and Fingleton 1985 in that I am mostly concerned with the relevance of spatial effects on model specification, estimation and other inference in what I call a model driven approach as opposed to a data driven approach in spatial statistics. I attempt to combine a rigorous econometric perspective with a comprehensive treatment of methodological issues in spatial analysis.

Handbook of Research Methods and Applications in Spatially Integrated Social Science Robert Stimson, 2014-07-31 The chapters in this book provide coverage of the theoretical underpinnings and methodologies that typify research using a Spatially Integrated Social Science (SISS) approach. Computational Science and Its Applications -- ICCSA 2009 Osvaldo Gervasi, David Taniar, Beniamino Murgante, Antonio Laganà, Youngsong Mun, 2009-07-09 The two volume set LNCS 5592 and 5593 constitutes the refereed proceedings of the International Conference on Computational Science and Its Applications (ICCSA 2009) held in Seoul, Korea, in June/July 2009. The two volumes contain papers presenting a wealth of original research results in the field of computational science, from foundational issues in computer science and mathematics to advanced applications in virtually all sciences making use of computational techniques. The topics of the fully refereed papers are structured according to the five major conference themes: computational methods, algorithms and scientific applications, high performance technical computing and networks, advanced and emerging applications, as well as information systems and information technologies. Moreover, submissions from more than 20 workshops and technical sessions contribute to this publication. These cover topics such as geographical analysis, urban modeling, spatial statistics, wireless and ad hoc networking, logical scientific and computational aspects of pulse phenomena in transitions, high performance computing and information visualization, sensor network and its applications, molecular simulations, structures and processes, collective evolutionary systems, software engineering processes and applications, molecular simulations, structures and processes, internet communication security, security and privacy in

Introduction to Urban Science Luis M. A. Bettencourt, 2021-08-17 A novel integrative approach

to cities as complex adaptive systems applicable to issues ranging from innovation to economic prosperity to settlement patterns Human beings around the world increasingly live in urban environments In Introduction to Urban Science Luis Bettencourt takes a novel integrative approach to understanding cities as complex adaptive systems claiming that they require us to frame the field of urban science in a way that goes beyond existing theory in such traditional disciplines as sociology geography and economics He explores the processes facilitated by and in many cases unleashed for the first time by urban life through the lenses of social heterogeneity complex networks scaling circular causality and information Though the idea that cities are complex adaptive systems has become mainstream until now those who study cities have lacked a comprehensive theoretical framework for understanding cities and urbanization for generating useful and falsifiable predictions and for constructing a solid body of empirical evidence so that the discipline of urban science can continue to develop Bettencourt applies his framework to such issues as innovation and development across scales human reasoning and strategic decision making patterns of settlement and mobility and their influence on socioeconomic life and resource use inequality and inequity biodiversity and the challenges of sustainable development in both high and low income nations It is crucial says Bettencourt to realize that cities are not zero sum games and that knowledge human cooperation and collective action can build a better future

Behavioral Predictive Modeling in Economics

Songsak Sriboonchitta, Vladik Kreinovich, Woraphon Yamaka, 2020-08-05 This book presents both methodological papers on and examples of applying behavioral predictive models to specific economic problems with a focus on how to take into account people's behavior when making economic predictions This is an important issue since traditional economic models assumed that people make wise economic decisions based on a detailed rational analysis of all the relevant aspects However in reality as Nobel Prize winning research has shown people have a limited ability to process information and as a result their decisions are not always optimal Discussing the need for prediction oriented statistical techniques since many statistical methods currently used in economics focus more on model fitting and do not always lead to good predictions the book is a valuable resource for researchers and students interested in the latest results and challenges and for practitioners wanting to learn how to use state of the art techniques
