Speech Processing in Modern Communication Israel Cohen, Jacob Benesty, Sharon Gannot, 2009-12-18 Modern communication devices such as mobile phones teleconferencing systems VoIP etc are often used in noisy and reverberant environments Therefore signals picked up by the microphones from telecommunication devices contain not only the desired near end speech signal but also interferences such as the background noise far end echoes produced by the loudspeaker and reverberations of the desired source These interferences degrade the fidelity and intelligibility of the near end speech in human to human telecommunications and decrease the performance of human to machine interfaces i e automatic speech recognition systems The proposed book deals with the fundamental challenges of speech processing in modern communication including speech enhancement interference suppression acoustic echo cancellation relative transfer function identification source localization dereverberation and beamforming in reverberant environments Enhancement of speech signals is necessary whenever the source signal is corrupted by noise In highly non stationary noise environments noise transients and interferences may be extremely annoying Acoustic echo cancellation is used to eliminate the acoustic coupling between the loudspeaker and the microphone of a communication device Identification of the relative transfer function between sensors in response to a desired speech signal enables to derive a reference noise signal for suppressing directional or coherent noise sources Source localization dereverberation and beamforming in reverberant environments further enable to increase the intelligibility of the near end speech signal

speech signal *Digital Speech Processing* A. Nejat Ince, 2013-03-09 After almost three scores of years of basic and applied research the field of speech processing is at present undergoing a rapid growth in terms of both performance and applications and this is fuelled by the advances being made in the areas of microelectronics computation and algorithm design Speech processing relates to three aspects of voice communications Speech Coding and transmission which is mainly concerned with man to man voice communication Speech Synthesis which deals with machine to man communication Speech Recognition which is related to man to machine communication Widespread application and use of low bit rate voice codec synthesizers and recognizers which are all speech processing products requires ideally internationally accepted quality assessment and evaluation methods as well as speech processing standards so that they may be interconnected and used independently of their designers and manufacturers without costly interfaces This book presents in a tutorial manner both fundamental and applied aspects of the above topics which have been prepared by well known specialists in their respective areas The book is based on lectures which were sponsored by AGARD NATO and delivered by the authors in several NATO countries to audiences consisting mainly of academic and industrial R D engineers and physicists as well as civil and military C3I systems planners and designers **Introduction to Digital Speech Processing** Lawrence R. Rabiner, Ronald W. Schafer, 2007 Provides the reader with a practical introduction to the wide range of important concepts that comprise the field of digital speech processing Students of speech research and researchers working in the field can use this as a reference guide **Audio Source Separation and Speech Enhancement** Emmanuel Vincent, Tuomas Virtanen, Sharon Gannot, 2018-10-22 Learn the technology behind hearing aids Siri and Echo Audio source separation and speech enhancement aim to extract one or more source signals of interest from an audio recording involving several sound sources These technologies are among the most studied in audio signal processing today and bear a critical role in the success of hearing aids hands free phones voice command and other noise robust audio analysis systems and music post production software Research on this topic has followed three convergent paths starting with sensor array processing computational auditory scene analysis and machine learning based approaches such as independent component analysis respectively This book is the first one to provide a comprehensive overview by presenting the common foundations and the differences between these techniques in a unified setting Key features Consolidated perspective on audio source separation and speech enhancement Both historical perspective and latest advances in the field e.g. deep neural networks Diverse disciplines array processing machine learning and statistical signal processing Covers the most important techniques for both single channel and multichannel processing This book provides both introductory and advanced material suitable for people with basic knowledge of signal processing and machine learning Thanks to its comprehensiveness it will help students select a promising research track researchers leverage the acquired cross domain knowledge to design improved techniques and engineers and developers choose the right technology for their target application scenario It will also be useful for

practitioners from other fields e.g. acoustics, multimedia, phonetics and musicology willing to exploit audio source separation or speech enhancement as pre-processing tools for their own needs

Voice Communication Between Humans and Machines for the National Academy of Sciences, 1994-02-01 Science fiction has long been populated with conversational computers and robots. Now speech synthesis and recognition have matured to where a wide range of real world applications from serving people with disabilities to boosting the nation's competitiveness are within our grasp. *Voice Communication Between Humans and Machines* takes the first interdisciplinary look at what we know about voice processing where our technologies stand and what the future may hold for this fascinating field. The volume integrates theoretical, technical and practical views from world class experts at leading research centers around the world reporting on the scientific bases behind human-machine voice communication, the state of the art in computerization and progress in user-friendliness. It offers an up-to-date treatment of technological progress in key areas: speech synthesis, speech recognition and natural language understanding. The book also explores the emergence of the voice processing industry and specific opportunities in telecommunications and other businesses in military and government operations and in assistance for the disabled. It outlines as well practical issues and research questions that must be resolved if machines are to become fellow problem solvers along with humans. *Voice Communication Between Humans and Machines* provides a comprehensive understanding of the field of voice processing for engineers, researchers and business executives as well as speech and hearing specialists, advocates for people with disabilities, faculty and students and interested individuals.

Springer Handbook of Speech Processing Jacob Benesty, M. M. Sondhi, Yiteng Huang, 2007-11-28 This handbook plays a fundamental role in sustainable progress in speech research and development. With an accessible format and with accompanying DVD Rom it targets three categories of readers: graduate students, professors and active researchers in academia and engineers in industry who need to understand or implement some specific algorithms for their speech-related products. It is a superb source of application-oriented, authoritative and comprehensive information about these technologies; this work combines the established knowledge derived from research in such fast-evolving disciplines as Signal Processing and Communications, Acoustics, Computer Science and Linguistics.

Human-Centered Design of E-Health Technologies: Concepts, Methods and Applications Ziefle, Martina, R[ü]cker, Carsten, 2010-12-31 This book unites researchers and industry practitioners from different disciplines to share their domain-specific knowledge and contribute to a holistic introduction into the area of human-centered design for e-health applications. Provided by publisher.
