Ai In Everyday Life Framework:

A Comprehensive Framework for Artificial Intelligence Azhar ul Haque Sario, 2025-10-11 Finally a single book that connects every piece of the AI puzzle from core principles to the state of the art This book offers a complete journey through the world of Artificial Intelligence It starts with the absolute foundations asking What is AI and exploring its philosophical roots You will learn to think about intelligence through the core concept of agents acting in environments From there we build the first problem solving tools using state space search The book covers both uninformed and informed search strategies like A* It then moves into multi agent environments with adversarial search for games using algorithms like Minimax You will learn how to represent problems declaratively with Constraint Satisfaction Problems The curriculum then makes a major shift into knowledge representation introducing formal logic as a tool for reasoning After mastering propositional and first order logic the book confronts a crucial real world challenge uncertainty It introduces probability theory Bayesian networks and models for reasoning over time like Hidden Markov Models The final parts dive into the machine learning revolution You will get a thorough grounding in supervised learning including regression decision trees and SVMs You will discover patterns in data with unsupervised learning techniques like k Means and PCA The journey culminates at the modern frontier exploring the deep learning architectures that power today's AI You will understand Convolutional Neural Networks for vision RNNs and the powerful Transformer models for language What makes this book different is its synthesized and logical pathway Instead of presenting a disconnected list of algorithms it builds your understanding layer by layer explaining why the field evolved as it did It starts with a solid intellectual and computational bedrock ensuring you grasp the core concepts of agency and systematic exploration before moving to more complex topics It clearly explains the pivotal shifts in thinking from the certainty of logic to the degrees of belief in probability and from hand crafted rules to learning directly from data By tracing the progression from simple search to complex statistical methods it reveals how the need to overcome computational complexity drove innovation This narrative approach provides a deeper more intuitive understanding of how these powerful ideas connect The book doesn't just teach you how to build AI it equips you to understand its impact and build it responsibly Disclaimer This author has no affiliation with the board and it is independently produced under nominative fair use
