Smart Grids David Bakken, 2017-12-19. The utilization of sensors, communications, and computer technologies to create greater efficiency in the generation, transmission, distribution, and consumption of electricity will enable better management of the electric power system. As the use of smart grid technologies grows, utilities will be able to automate meter reading and billing, and consumers will be more aware of their energy usage and the associated costs. The results will require utilities and their suppliers to develop new business models, strategies, and processes. With an emphasis on reducing costs and improving return on investment (ROI) for utilities, *Smart Grids: Clouds, Communications, Open Source, and Automation* explores the design and implementation of smart grid technologies, considering the benefits to consumers as well as businesses. Focusing on industrial applications, the text provides a state-of-the-art account of the smart grid. It explains how smart grid technologies are currently being used, includes detailed examples and test cases for real-life implementation, discusses trade-offs associated with the utilization of smart grid technologies, describes smart grid simulation software, and offers insight into the future of the smart grid. The electric power grid is in the early stages of a sea of change. Nobody knows which business models will survive, but companies heeding the lessons found in *Smart Grids: Clouds, Communications, Open Source, and Automation* might just increase their chances for success.

Intelligent Techniques in Engineering Management Cengiz Kahraman, Sezi Çevik Onar, 2015-05-05. Rethink! Prototyping Christoph Gengnagel,Emilia Nagy,Rainer Stark,2015-11-18 In this book the authors describe the

findings derived from interaction and cooperation between scientific actors employing diverse practices They reflect on distinct prototyping concepts and examine the transformation of development culture in their fusion to hybrid approaches and solutions The products of tomorrow are going to be multifunctional interactive systems and already are to some degree today Collaboration across multiple disciplines is the only way to grasp their complexity in design concepts This underscores the importance of reconsidering the prototyping process for the development of these systems particularly in transdisciplinary research teams Rethinking Prototyping new hybrid concepts for prototyping was a transdisciplinary project that took up this challenge The aim of this programmatic rethinking was to come up with a general concept of prototyping by combining innovative prototyping concepts which had been researched and developed in three sub projects Hybrid Prototyping developed new prototyping approaches to validate and evaluate holistically developed systems with their services infrastructure and business models Blended Prototyping addressed a new technique whereby prototypes for user interfaces of software applications can be generated from hand drawings and immediately be tested Beyond Prototyping examined the issue of the prototype in connection with algorithmically generated design for producing tailor made products
