Structure in Language Thomas Berg, 2011-01-13 This book examines one of the allegedly unique features of human language structure sensitivity Its point of departure is the distinction between content and structural units which are defined in psycholinguistic terms The focus of the book is on structural representations in particular their hierarchicalness and their branching direction Structural representations reach variable levels of activation and are therefore gradient in nature Their variable strength is claimed to account for numerous effects including differences between individual analytical levels differences between languages as well as pathways of language acquisition and breakdown English is found to be consistent in its branching direction and to have evolved its branching direction in line with the cross level harmony constraint Structure sensitivity is argued to be highly variable both within and across languages and consequently an unlikely candidate for a defining property of human language Experimental Slips and Human Error Bernard J. Baars, 2013-06-29 Whereas most humans spend their time trying to get things right psychologists are perversely dedicated to error Errors are extensively used to investigate perception memory and performance some clinicians study errors like tea leaves for clues to

unconscious motives and this volume presents the work of researchers who in an excess of perversity actually cause people to make predictable errors in speech and action Some reasons for this oddity are clear Errors seem to stand at the nexus of many deep psychological questions The very concept of error presupposes a goal or criterion by comparison to which an error is an error and goals bring in the foundation issues of control motivation and volition Baars 1987 1988 Wiener 1961 Errors serve to measure the quality of performance in learning in expert knowledge and in brain damage and other dysfunctional states and by surprising us they often call attention to phenomena we might otherwise take for granted Errors also seem to reveal the natural joints in perception language memory and problem solving revealing units that may otherwise be invisible e g MacKay 1981 Miller 1956 Newell Treisman Gelade 1980

Cicerone, 2012-12-06 For a period of some fifteen years following completion of my internship training in clinical psychology 1950-1951 at the Washington University School of Medicine and my concurrent successful navigation through that school's neuroanatomy course clinical work in neuropsychology for me and the psychologists of my generation consisted almost exclusively of trying to help our physician colleagues differentiate patients with neurologic from those with psychiatric disorders In time experience led all of us from the several disciplines involved in this enterprise to the conclusion that the crude diagnostic techniques available to us circa 1945-1965 had garnered us little valid information upon which to base such complex differential diagnostic decisions It now is gratifying to look back and review the remarkable progress that has occurred in the field of clinical neuropsychology in the four decades since I was a graduate student In the late 1940s such pioneers as Ward Halstead Alexander Luria George Yacorzynski Hans Lukas Teuber and Arthur Benton already were involved in clinical studies that by the late 1960s would markedly have improved the quality of clinical practice However the only psychological tests that the clinical psychologist of my immediate post Second World War generation had as aids for the diagnosis of neurologically based conditions involving cognitive deficit were such old standbys as the Wechsler Bellevue Rorschach Draw A Person Bender Gestalt and Graham Kendall Memory for Designs Test
