The Cointegrated Var Model Methodology And Applications Advanced Texts In Econometrics:

The Cointegrated VAR Model Katarina Juselius, 2006-12-07 This valuable text provides a comprehensive introduction to VAR modelling and how it can be applied. In particular, the author focuses on the properties of the Cointegrated VAR model and its implications for macroeconomic inference when data are non-stationary. The text provides a number of insights into the links between statistical econometric modelling and economic theory and gives a thorough treatment of identification of the long-run and short-run structure as well as of the common stochastic trends and the impulse response functions, providing in each case illustrations of applicability. This book presents the main ingredients of the Copenhagen School of Time Series Econometrics in a transparent and coherent framework. The distinguishing feature of this school is that econometric theory and applications have been developed in close cooperation. The guiding principle is that good econometric work should take econometrics institutions and economics seriously. The author uses a single data set throughout most of the book to guide the reader through the econometric theory while also revealing the full implications for the underlying economic model. To test and ensure full understanding, the book concludes with the introduction of two new data sets to combine readers' understanding of econometric theory and economic models with economic reality.

The Elgar Companion to Recent Economic Methodology J. B. Davis, 2011-01-01 Economic methodology has traditionally been associated with logical positivism in the vein of Milton Friedman, Karl Popper, Imre Lakatos and Thomas Kuhn. However, the emergence and proliferation of new research programs in economics have stimulated many novel developments in economic methodology. This impressive Companion critically examines these advances in methodological thinking, particularly those that are associated with the new research programs which challenge standard economic methodology. Bringing together a collection of leading contributors to

this new methodological thinking the authors explain how it differs from the past and point towards further concerns and future issues The recent research programs explored include behavioral and experimental economics neuroeconomics new welfare theory happiness and subjective well being research geographical economics complexity and computational economics agent based modeling evolutionary thinking macroeconomics and Keynesianism after the crisis and new thinking about the status of the economics profession and the role of the media in economics This important compendium will prove invaluable for researchers and postgraduate students of economic methodology and the philosophy of economics Practitioners in the vanguard of new economic thinking will also find plenty of useful information in this path breaking book

Multiplicity of Time Scales in Complex Systems Bernhelm Booß-Bavnbek, Jens Hesselbjerg Christensen, Katherine Richardson, Oriol Vallès Codina, 2024-04-02 Note to the interested reader to have a look at the companion to this volume *Challenges for Sciences and Communication I* ISBN 978 3 031 28048 1 This highly interdisciplinary volume brings together a carefully curated set of case studies examining complex systems with multiple time scales MTS across a variety of fields materials science epidemiology cell physiology mathematics climatology energy transition planning ecology economics sociology history and cultural studies The book addresses the vast diversity of interacting processes underlying the behaviour of different complex systems highlighting the multiplicity of characteristic time scales that are a common feature of many and showcases a rich variety of methodologies across disciplinary boundaries Self organizing out of equilibrium ever evolving systems are ubiquitous in the natural and social world Examples include the climate ecosystems living cells epidemics the human brain and many socio economic systems across history Their dynamical behaviour poses great challenges in the pressing context of the climate crisis since they may involve nonlinearities feedback loops and the emergence of spatial temporal patterns portrayed by resilience or instability plasticity or rigidity bifurcations thresholds and tipping points burst in excitation or slow relaxation and worlds of other asymptotic behaviour hysteresis and resistance to change Chapters can be read individually by the reader with special interest in such behaviours of particular

complex systems or in specific disciplinary perspectives Read together however the case studies opinion pieces and meta studies on MTS systems presented and analysed here combine to give the reader insights that are more than the sum of the book s individual chapters as surprising similarities become apparent in seemingly disparate and unconnected systems MTS systems call into question na ve perceptions of time and complexity moving beyond conventional ways of description analysis understanding modelling numerical prediction and prescription of the world around us This edited collection presents new ways of forecasting introduces new means of control and perhaps as the most demanding task it singles out a sustainable description of an MTS system under observation offering a more nuanced interpretation of the floods of quantitative data and images made available by high and low frequency measurement tools in our unprecedented era of information flows

Econometric Business Cycle Research Jan Jacobs, 2012-12-06 Econometric Business Cycle Research deals with econometric business cycle research EBCR a term introduced by the Nobel laureate Jan Tinbergen for his econometric method of testing economic business cycle theories EBCR combines economic theory and measurement in the study of business cycles i e ups and downs in overall economic activity We assess four methods of EBCR business cycle indicators simultaneous equations models vector autoregressive systems and real business indicators After a sketch of the history of the methods we investigate whether the methods meet the goals of EBCR the three traditional ones description forecasting and policy evaluation and the one Tinbergen introduced the implementation testing of business cycles The first three EBCR methods are illustrated for the Netherlands a typical example of a small open economy The main conclusion of the book is that simultaneous equation models are the best vehicle for EBCR if all its goals are to be attained simultaneously This conclusion is based on a fairly detailed assessment of the methods and is not overturned in the empirical illustrations The main conclusion does not imply the end of other EBCR methods Not all goals have to be met with a single vehicle other methods might serve the purpose equally well or even better For example if one is interested in business cycle forecasts one might prefer a business cycle indicator or vector autoregressive system A second conclusion is that many ideas concepts that play an important role in current discussions about econometric methodology in general and EBCR in particular were put forward in the 1930s and 1940s A third conclusion is that it is difficult if not impossible to compare the outcomes of RBC models to outcomes of the other three methods because RBC modellers are not interested in modelling business cycles on an observation per observation basis A more general conclusion in this respect is that methods should adopt the same concept of business cycles to make them comparable
