The Chain Reaction Model Of Human Activity:

The Chain Reaction J. J. Broeze, 1968 **Self-Organized Criticality in Astrophysics** Markus Aschwanden, 2011-01-11
Markus Aschwanden introduces the concept of self organized criticality SOC and shows that due to its universality and ubiquity it is a law of nature for which he derives the theoretical framework and specific physical models in this book He begins by providing an overview of the many diverse phenomena in nature which may be attributed to SOC behaviour The author then introduces the classic lattice based SOC models that may be explored using numerical computer simulations These simulations require an in depth knowledge of a wide range of mathematical techniques which the author introduces and describes in subsequent chapters These include the statistics of random processes time series analysis time scale distributions and waiting time distributions Such mathematical techniques are needed to model and understand the power law like occurrence frequency distributions of SOC phenomena Finally the author discusses fractal geometry and scaling laws before looking at a range of physical SOC models which may be applicable in various aspects of astrophysics Problems solutions and a glossary will enhance the pedagogical usefulness of the book SOC has been receiving growing attention in the astrophysical and solar physics community This book will be welcomed by students and researchers studying complex critical phenomena *The Handbook of Action Learning* John Edmonstone, 2024-04-15

Action learning is one of the most prominent individual and organisational development approaches used in all parts of the world including in over 70 member states of the United Nations From its early beginnings in the 1970s it has been adopted in private public and third sector organisations and has produced several variations Used for leadership and management development to support teamwork and problem solving and to encourage creative thinking it can help to develop and enhance the learning capacity for individuals and organisations Applied as a discrete activity focused on a priority need or on new or changed roles as a linkage between more formal programs and the workplace or blended with other elements in a program this book distils current and previous practice and theory to provide an up to date guide to action learning The book will provide readers with an understanding of action learning including the major elements the choice of issues the key skills the role of the facilitator and applications organisation wide It will address such important aspects as how action learning can adapt to different national and regional cultures and how it can be evaluated It will also offer a range of resources for further and deeper understanding
