The Challenge Of Missions

Oswald Jeffrey Smith

The Challenge Of Missions:

The Challenge of Missions Smith Oswald J, Oswald J. Smith, 1995-02 Between Horror and Hope is a study of Paul's metaphorical language of death in Romans 6:1-11. The scholarly debate focuses on two main issues: the origin of the *commentatio mortis* tradition and its development. Dr. Sabou argues that the origin of this terminology is original to Paul; that it was the apostle's own insight into the meaning of Christ's death: a death to sin and his understanding of the identity of Christ in his death as the anointed Davidic king which guided him to create this metaphor of dying to sin as a way of describing the relationship of the believer with sin. On the development of this language of death, the author argues that this language conveys two aspects: horror and hope. The first is discussed in the context of crucifixion, in which Paul explains the believer's death to sin by presenting Christ's death as the death of the anointed Davidic king who won the victory over sin and death by rising from the dead. Paul affirms that believers are coalesced with what was proclaimed about Christ's death and resurrection, thereby allowing him to assert that the releasing of the body from the power of sin is a result of crucifixion. This crucifixion is the condemnation inflicted on our past lives in the age inaugurated by Adam's sin, and this is such a horrible event that believers have to stay away from sin since sin leads to such punishment. In contrast, hope is presented in the context of burial. The believer's burial with Christ points to the fact that they are part of Christ's family, and this is accomplished by the overwhelming action of God by which he pushes us toward the event of Christ's death, an act pictured in baptism. It is this burial with Christ that allows believers to share with Christ in newness of life.

Implement Missions to Achieve Climate Targets? OECD, 2024-11-22 Mission-oriented innovation policies (MOIPs) have reached a critical point, facing pressure to demonstrate their effectiveness. Although many countries have adopted MOIPs, evidence of their impact remains largely anecdotal. This report uses a unique database of 101 net-zero missions and 17 in-depth case studies to assess how MOIPs support national greenhouse gas reduction goals compared to traditional Science, Technology, and Innovation (STI) policies. MOIPs promote broad, ambitious objectives but their strategies often lack clear focus, measurable targets, and systematic monitoring. While STI authorities have led mission efforts, they need stronger connections to scaling and deployment actors. To move beyond research and innovation, MOIPs require dedicated multiannual funding and new financial mechanisms to attract private sector investment. However, proactive and flexible portfolio management practices are still underdeveloped, limiting missions' potential to achieve systemic benefits. Despite progress, MOIPs face three

main challenges an overemphasis on technological innovation STI Trap weak influence on broader policy Orientation Trap and insufficient engagement with private resources Policy Trap These challenges highlight the need for a new generation of missions that more closely integrate a broader array of public and private actors and resources to drive transformative change and achieve national net zero targets
