The monograph offers a comprehensive legal analysis of the categories and phenomena of global digitalization such as the metaverse, the artificial Internet, digital rights, digital identity, etc. The key topics include understanding artificial intelligence as a legal concept, studying the problems of its legal personality and responsibility, and establishing its significance and role in the context of hybrid warfare. In addition, the study analyzes the potential of artificial intelligence technologies in the economic and industrial revival of Ukraine, the possibilities and legal problems of their use in legal, including notary practice, in the field of medicine and pharmacy, in education, and the corporate sector. It also explores the current problems of using blockchain technology and artificial intelligence in the management of intellectual property rights. This emphasizes the need for interdisciplinary cooperation to address the challenges of protecting sensitive data and innovation while promoting a sustainable balance between innovation and social well-being.
